Nursing Staff in Hospitals and Nursing Homes - Committee on the Adequacy of Nursing Staff in Hospitals and Nursing Homes 1996-04-10

Hospitals and nursing homes are responding to changes in the health care system by modifying staffing levels and the mix of nursing personnel.

But do these changes endanger the quality of patient care? Do nursing staff suffer increased rates of injury, illness, or stress because of changing workplace demands? These questions are addressed in *Nursing Staff in Hospitals and Nursing Homes*, a thorough and authoritative look at today's health care system that also takes a long-term view of staffing needs for nursing as the nation moves into the next century. The committee draws fundamental conclusions about the evolving role of nurses in hospitals and nursing homes and presents recommendations about staffing decisions, nursing training, measurement of quality, reimbursement, and other areas. The volume also discusses work-related injuries, violence toward and abuse of nursing staffs, and stress among nursing personnel--and examines whether these problems are related to staffing levels. Included is a readable overview of the underlying trends in health care that have given rise to urgent questions about nurse staffing: population

changes, budget pressures, and the introduction of new technologies. *Nursing Staff in Hospitals and Nursing Homes* provides a straightforward examination of complex and sensitive issues surround the role and value of nursing on our health care system.

The way autoimmune disease is viewed and treated is undergoing a major change as an estimated 50 million Americans (and growing) suffer from these conditions. For many patients, the key to true wellness is in holistic treatment, although they might not know how to begin their journey to total recovery. The Autoimmune Wellness Handbook, from Mickey Trescott and Angie Alt of Autoimmune-Paleo.com, is a comprehensive guide to living healthfully with autoimmune disease. While conventional medicine is limited to medication or even surgical fixes, Trescott and Alt introduce a complementary solution that focuses on seven key steps to recovery: inform, collaborate, nourish, rest, breathe, move, and connect.
