Now revised for the first time in more than a decade, this fourth edition provides a comprehensive summary of the global patterns of cancer incidence and mortality, current understanding of the major causal determinants, and a rationale for preventive interventions. Special attention is paid to molecular epidemiologic approaches that address the wider role of genetic predisposition and gene-environment interactions in cancer etiology and pathogenesis. New and timely chapters on environmental and social-epidemiologic factors include:

- The role of social class disparities
- The role of obesity and physical inactivity
- The potential effects of electromagnetic fields and radiofrequency radiation
- The principles of cancer chemoprevention

For both seasoned

professionals and newer generations of students and researchers, this fourth edition of CANCER EPIDEMIOLOGY AND PREVENTION remains the authority in the field -- a work of distinction that every lab, library, student, professional, or researcher should have close at hand.

Occupational Epidemiology, Second Edition - Richard R. Monson
1990-04-25

The objective of this second edition of Occupational Epidemiology is to update and extend the first edition. It includes a basic introduction to epidemiology in the occupational context and introduces new analytic methods. This volume-packed with mostly new material-emphasizes the relation between occupation and a variety of illnesses. These chapters extensively cover the current epidemiologic literature on occupation and provide a valuable basic reference. This interesting work also includes case studies in occupational epidemiology. It discusses the evaluation of individual studies and the integration of information from several studies. Students as well as professionals who wish to integrate an understanding of epidemiology into their professional practice will find this book to be an indispensable resource tool.

Textbook of Occupational Medicine Practice - Tar-Ching Aw
2017-08-23

This fourth edition continues to provide a link between occupational health and clinical practice. It covers target organ systems that can be affected by hazardous exposures in workplaces, and it focuses on the clinical presentations, investigations and management of affected individuals. We have retained consideration of some special issues relevant to occupational medicine practice in this new edition. The main

emphasis continues to be prevention of disease and early detection of health effects. This edition of the book has been updated to include new materials, topics, and references. We have retained a few of the previous case studies and illustrations, and introduced several new ones. There are new chapters on audit and evidence-based practice and on occupational cancer. We trust that this edition addresses many of the recommendations that were provided by readers of the previous edition. We have again asked international experts to author many of the chapters. Some of the authors are from Asia, and others from the US, UK, the Middle East and Australia. All the authors will have either clinical or academic experience in occupational medicine practice. The book will be of interest to medical practitioners, especially those in primary care and doctors intending to pursue a career in occupational medicine. It would also be relevant for non-medical health and safety professionals wanting to know more about health effects resulting from occupational exposures. Other groups who may find this edition useful as a ready reference are medical students, occupational health nurses, or clinical specialists in fields such as dermatology, respiratory medicine or toxicology. The book is targeted at all those who are interested in the interaction between work and health, and how occupational diseases and work-related disorders may present.

Occupational Cancers - Sisko Anttila 2014-07-28

This book is a comprehensive guide to occupational factors of malignant diseases. It discusses potentially work-related malignancies, in the context of exposure assessment, specific clinical and pathological features of occupational cancer and biomarkers of exposure and disease. Epidemiological data about risk ratios of the cancer in question are reviewed for various occupations and with exposure to specific carcinogens, carcinogenic mechanisms, host susceptibility factors (genetic and other) and other environmental and life-style risk factors. Aspects such as surveillance of workers exposed to carcinogens and

strategies for prevention of occupational cancer are also discussed. Occupational Cancers is aimed at oncologists, pathologists, residents in training, clinical researchers, clinicians in occupational health, epidemiologists, pulmonologists, lawyers and public health officials.

Textbook of Occupational Medicine Practice - David Koh 2001-07-20
This book provides a link between occupational health and clinical practice. Besides being a valuable starting point for health professionals with an interest in occupational medicine as well as those intending to specialize in occupational medicine, the book will be a useful guide for all those who are interested in occupational medicine practice, including medical students at various levels, occupational health nurses, general practitioners, and more senior professionals in occupational medicine. In other words, it is for all who have committed themselves to the best practice for the health of working people. The first edition is now used in occupational health training courses in several countries, such as Singapore, Malaysia, Indonesia, Vietnam and Jordan. The second edition is an extensively revised and updated version, with several new contributors and new material. The contributors are a mix of international and regional occupational health specialists and clinicians. The contents of the book have been streamlined to appear in two sections. The editors have retained the approach of examining occupational health issues and concerns from the standpoint of clinical presentations of the different organ systems. Clinically oriented chapters form Section 1. Section 2 comprises other issues of special interest to occupational health practitioners, such as screening and routine medical examinations, health promotion at the workplace, assessment of disability for compensation, medical planning and management of industrial disasters, and prevention of occupational diseases. Several changes have directly resulted from feedback from readers of the first edition. Among them are the inclusion of new chapters on occupational infections, the health of corporate travelers, shiftwork, and occupational health standards and legislation. As before, case studies have been

incorporated in the chapters to make clear the relevant issues.

Women and Health - Marlene B. Goldman 2012-12-31

Women and Health is a comprehensive reference that addresses health issues affecting women of all ages — from adolescence through maturity. It goes far beyond other books on this topic, which concentrate only on reproductive health, and has a truly international perspective. It covers key issues ranging from osteoporosis to breast cancer and other cancers, domestic violence, sexually transmitted diseases, occupational hazards, eating disorders, heart disease and other chronic illnesses, substance

abuse, and societal and behavioral influences on health. In this second edition of *Women and Health*, chapters thoughtfully explore the current state of women's health and health care, including the influences of sex and gender on the occurrence of a wide variety of diseases and conditions. All chapters have been extensively updated and emphasize the epidemiology of the condition — the etiology, occurrence, primary and secondary prevention (screening), risk factors, surveillance, changing trends over time, and critical analysis of the diagnostic and treatment options and controversies. Treatment sections in each chapter have been expanded to create a stronger dialogue between epidemiologists and women's health practitioners. Saves researchers and clinicians time in quickly accessing the very latest details on a broad range of women's health issues, as opposed to searching through thousands of journal articles Provides a common language for epidemiologists, public health practitioners, and women's health specialists to discuss the behavioral, cultural, and biological determinants of women's health Researchers and medical specialists will learn how the gender-specific risks and features of one organ system's diseases affect the health of other organ systems For example: Hormone replacement therapy used to treat imbalance within the endocrine system is also being used to prevent and treat cardiovascular disease; Drugs developed for type 2 diabetes are now being used in chemoprevention Orients the non-gerontologist about the importance of considering the entire life cycle of women within research designs and treatment plans Professors teaching courses in women's health will use slides and additional materials to structure lectures/courses; students will use slides as a unique resource to study for exams

Chemical Carcinogens - Charles E. Searle 1976

Cancer causing agents are now known to exist throughout the environment-in polluted air and tobacco smoke, in various plants and foods, and in many chemicals that are used in industry and laboratories. With the incidence of cancer apparently on the rise, there has been an even greater push to find the causes of this ancient disease. The increased worldwide research effort has produced a vast amount of data

and new information which must be collated and interpreted. This monograph contains comprehensive accounts of the latest theories of cancer chemistry and biology and of the major hazards identified so far.

Reducing Environmental Cancer Risk - Suzanne H. Reuben 2010-10
Though overall cancer incidence and mortality have continued to decline in recent years, cancer continues to devastate the lives of far too many Americans. In 2009 alone, 1.5 million American men, women, and children were diagnosed with cancer, and 562,000 died from the disease. There is a growing body of evidence linking environmental exposures to cancer. The Pres. Cancer Panel dedicated its 2008-2009 activities to examining the impact of environmental factors on cancer risk. The Panel considered industrial, occupational, and agricultural exposures as well as exposures related to medical practice, military activities, modern lifestyles, and natural sources. This report presents the Panel's recommend. to mitigate or eliminate these barriers. Illus.

Occupational Cancers - Sisko Anttila 2020-02-10

This revised and updated new edition of a successful book is a multidisciplinary, comprehensive guide to occupational factors of malignant diseases. Building on the first edition, new research discoveries and their consequences in our understanding on carcinogenic mechanisms, diagnosis and attribution of occupational cancers are

discussed. Examples of such discoveries are germline and acquired mutations of BAP1 in malignant mesothelioma, which have led to changes in diagnostic criteria, and carcinogen-specific genetic and epigenetic alterations in lung cancer. There are several new chapters, including gastrointestinal cancers, epidemiology of lung cancer, cancer of thyroid, and the role of primary health care in occupational cancer control. Occupational Cancers is aimed at experienced and trainee

oncologists, pathologists, clinicians in occupational health, and pulmonologists, as well as epidemiologists, clinical researchers, lawyers and public health officials.
