Siting Futurity - Susan Ingram 2021-05-03
It also shows how work with a connection to Vienna by international stars like David Bowie, Wes Anderson, and Christoph Schlingensief has

absorbed the same principles. While the overwhelming scale of technological development and the ensuing problems and crises may not have been deliberately designed to induce resignation, passivity, and despair, those who benefit from the related hyperobjects of financialization and climate change must find it convenient that they do, as demoralization reduces resistance to their profit-making machinations. It is in this context that Red Vienna's proud tradition of social engagement and long tradition of resistance and radicality deserves to be better known. Susan Ingram is Professor in the Department of Humanities at York University, Toronto, where she coordinates the Graduate Diploma for Comparative Literature and is affiliated with the Canadian Centre for German and European Studies and the Research Group on Language and Culture Contact. .

Caste and Ecology in the Social Insects -

George F. Oster 1978

In this pathbreaking and far-reaching work George Oster and Edward Wilson provide the first fully developed theory of caste evolution among the social insects. Furthermore, in studying the effects of natural selection in generally increasing the insects' ergonomic efficiency, they go beyond the concentration of previous researchers on the physiological mechanisms of the insects and turn our attention instead to the scale and efficiency of the insects' division of labor. Recognizing that the efficiency of the insect colony is based on a complex fitting of the division of labor to many simultaneous needs, including those imposed by the

distribution of resources and enemies around the nest, Professors Oster and Wilson are able to construct a series of mathematical models to characterize the agents of natural selection that promote particular caste systems. The social insects play a key role in the subject of sociobiology because their social organization is so rigid and can be related to genetic evolution. Because of this important consideration, the authors' work has consequences not only for entomology but also for general evolutionary theory.

Silviculture in the Tropics - Sven Günter
2011-06-24

This book integrates the latest global developments in forestry science and practice and their relevance for the sustainable management of tropical forests. The influence of social dimensions on the development of silvicultural concepts is another spotlight. Ecology and silvicultural options form all tropical continents, and forest formations from dry to moist forests and from lowland to mountain forests are covered. Review chapters which guide readers through this complex subject integrate numerous illustrative and quantitative case studies by experts from all over the world. On the basis of a cross-sectional evaluation of the case studies presented, the

authors put forward possible silvicultural contributions towards sustainability in a changing world. The book is addressed to a broad readership from forestry and environmental disciplines.

Bioactive Compounds from Natural Sources, Second Edition - Corrado Tringali 2011-09-27

The first edition of Bioactive Compounds from Natural Sources was published in a period of renewed attention to biologically active compounds of natural origin. This trend has continued and intensified—natural products are again under the spotlight, in particular for their possible pharmacological applications. Largely focusing on natural products as lead compounds in drug discovery, Bioactive Compounds from Natural Sources, Second Edition: Natural Products as Lead Compounds in Drug Discovery is actually a completely new volume containing surveys of selected recent advances in an interdisciplinary area covering chemistry of natural products, medicinal chemistry,

biochemistry, and other related topics. Written by some of the most reputed scientists in the field, this second edition includes new chapters from authors who contributed to the first edition as well as many chapters compiled by new authors. Introducing the reader to strategies and methods in the search for bioactive natural products, this book covers topics including: Natural sources of bioactive compounds such as aquatic cyanobacteria, filamentous fungi, and tropical plants, The tremendous potentiality of metabolic engineering of natural products biosynthesis The contribution of emerging or developing technologies to the study of bioactive natural compounds, namely computational methods and circular dichroism The potential of natural or natural-derived compounds for specific therapeutic applications: treatment of viral diseases, regulation of hypoxia-inducible factor, antimalarials, modulation of angiogenesis, and antitumor and wound-healing activity Selected examples of natural product

families and related synthetic analogues, namely polyphenols and camphotecins Compiled for researchers and Ph.D. students working in interdisciplinary fields, this book will also be appreciated by readers without a background in chemistry interested in bioactive natural products, their biological and pharmacological properties, and their possible use as chemopreventive or chemotherapeutic agents. Conversely, the biological and pharmacological data and methods are accessible by chemists.

A Musical Offering - Luis Sagasti 2020-07-21
Tracing a circular course that echoes Bach's Goldberg Variations, Luis Sagasti's second book to appear in English takes the guise of a musical scheherazade, recounting story after story, vibrating to celestial harmonies. From the music born of the sun to the music sent into space on the Voyager mission, from Rothko to rock music, from the composers of the concentration camps to a weeping room for Argentinian conscripts in the Falklands, A Musical Offering traverses the

shifting sands of fiction and history.

Permafrost Ecosystems - Akira Osawa

2010-01-04

Drawing from a decade-long collaboration between Japan and Russia, this important volume presents the first major synthesis of current knowledge on the ecophysiology of the coniferous forests growing on permafrost at high latitudes. It presents ecological data for a region long inaccessible to most scientists, and raises important questions about the global carbon balance as these systems are affected by the changing climate. Making up around 20% of the entire boreal forests of the northern hemisphere, these 'permafrost forest ecosystems' are subject to particular constraints in terms of temperature, nutrient availability, and root space, creating exceptional ecosystem characteristics not known elsewhere. This authoritative text explores their diversity, structure, dynamics and physiology. It provides a comparison of these forests in relation to

boreal forests elsewhere, and concludes with an assessment of the potential responses of this unique biome to climate change. The book will be invaluable to advanced students and researchers interested in boreal vegetation, forest ecology, silviculture and forest soils, as well as to researchers into climate change and the global carbon balance.

Inside the Space Ships - George Adamski
2018-03-12

What has happened to George Adamski since he wrote the famous incidents in Flying Saucers Have Landed? Since the memorable November 20, 1952, when he first made personal contact with a man from another world? Since December 13, 1952 when he was able to make photographs within 100 feet of the same saucer that had brought his original visitor? Inside The Space Ships is Adamski's own story of what has

happened to him since then. It begins with his first meeting, a few months later, with a second man from another world—his first meeting with one who speaks to him. This second visitor brings him to a Venusian Scout (flying saucer) and this, in turn, brings him to a mother ship. Later he is conveyed in both a Saturnian Scout and a Saturnian mother ship. Adamski tells us what transpires in these space craft and what the men and women from other worlds have told him. Adamski's photographs of flying saucers, originally published in Flying Saucers Have Landed, have since become world-famous as other witnesses in other parts of the world have succeeded in taking photographs identical with his. Now, however, in Inside The Space Ships, Adamski gives us 16 photographs and illustrations, no longer of Scouts (flying saucers) mostly, but of the great space ships from which they are launched. The main group of these photographs was taken in April, 1955, and neither the photographs nor a description of

them has ever been published before.

*Encyclopedia of Recorded Sound in the United
States* - Guy A. Marco 1993

This alphabetical reference covers the entire
spectrum of the recording of sound, from
Edison's experimental cylinders to contemporary
high technology. The major focus is on the

recorded sound industry in the US, with additional material on Canada, Europe, Australia, and New Zealand. The coverage is particularly strong on the earliest periods of recorded sound history--1877-1948, the 78 rpm era and 1949-1982, the LP era. In addition to performers and their work, entries also cover important commercial organizations, individuals who made significant technical contributions, societies and associations, sound archives and libraries, magazines, catalogs, award winners, technical topics, special and foreign terms, copyright laws, and other areas of interest. A Study of Modern Harmony - René Lenormand
1915

Ancient Ethics - Jörg Hardy 2014-05-14

This volume presents essays on Ancient ethics from Homer to Plotinus with a focus on the significance of Ancient ethical thinking for

contemporary ethics. Adapting Kant's words, we might describe philosophers today as holding that meta-ethics without normative ethics is empty; normative ethics without meta-ethics is blind. One fascinating feature of Ancient ethics is its close connection between content and method, between normative ethics and meta-ethics. In connecting ethical, epistemological, and cosmological issues, Ancient ethical theories strive for an integrated understanding of normativity. The project of this volume is to capture some of the colours of the bright spectrum of ancient ethics. The goal of bundling them together is, ultimately, to shed better light on the issues of contemporary ethics. Topics: Classical Chinese Ethics, Indian Ethics, Homeric Ethics, Socrates, Plato, Aristotle, Hellenistic philosophy, Plotinus, Ancient and Modern Moral Psychology, Hybrid Theories of Normativity, The Unity of the Virtues, The Art of Life and Morality (Lebenskunst und Moral). Contributors: J. Annas, M. Anagnostopoulos, R. Appressyan, Th.

The Cambridge History of Travel Writing -
Nandini Das 2019-01-24

Bringing together original contributions from scholars across the world, this volume traces the history of travel writing from antiquity to the Internet age. It examines travel texts of several national or linguistic traditions, introducing readers to the global contexts of the genre. From wilderness to the urban, from Nigeria to the polar regions, from mountains to rivers and the desert, this book explores some of the key places and physical features represented in travel writing. Chapters also consider the employment in travel writing of the diary, the letter, visual images, maps and poetry, as well as the relationship of travel writing to fiction, science,

translation and tourism. Gender-based and ecocritical approaches are among those surveyed. Together, the thirty-seven chapters here underline the richness and complexity of this genre.

Children's Illustrated World Atlas - Kathleen Baker 2017-07-03

Perspectives on Travel Writing - Glenn Hooper 2017-05-15

Ranging from the early modern to the postcolonial, and dealing mainly with encounters in Europe, the Americas and the Middle East, *Perspectives on Travel Writing* is a collection of new essays by international scholars that examines some of the various contexts of travel writing, as well as its generic characteristics. Contributions examine the similarities between autobiography and memoir, fiction, and travel writing, and attempt to define travel writing as a

genre. Utilising a variety of approaches, the essays display a shared concern with what travel writing does and how it does it. The effects of encounter and border-crossing on gender, 'race', and national identity are considered throughout. The collection begins with a review of some of the problems and issues facing the scholar of travel writing and moves on to a detailed discussion of the qualities of travel writing and its related forms. It then presents in chronological order a number of case studies, before closing with a critical discussion of approaches to the subject. An essay collection with broad historical and geographical coverage, this volume should appeal to students and researchers of travel and travel-related literatures from across the Humanities.

Les Mémoires Historiques de Se-ma Tsien - Qian Sima 1967

Brush Talks from Dream Brook - Shen Kuo 2011

This is the first complete English language version of Shen Kuo's seminal Brush Talks From Dream Brook published outside of China. Highly valued by scholars for its scientific and technological coverage, this encyclopaedic book

is probably the most important source text for technological advances and the organization of knowledge in China's golden age, the Song dynasty (960-1279). Author Shen Kuo is the most famous writer in China's scientific history. The significance of Brush Talks From Dream Brook has been thoroughly researched by scholars such as Fu Daiwie but it has not yet gained the recognition it deserves in Western studies on the history of science and technology. Written between 1086 and 1093 in note style, it covers astronomy, mathematics, geography, physics, biology, medicine, military, literary, history, archaeology and music. Now translated into English and available outside of China for the very first time, it's rightly recognised as a masterpiece in the history of Chinese scientific and technological development.

[Social Evolution in Ants](#) - Andrew F.G. Bourke

1995-11-05

Biologists have long been intrigued and confounded by the complex issues in the evolution and ecology of the social behaviour of insects. The self-sacrifice of sterile workers in ant colonies has been particularly difficult for evolutionary biologists to explain. This text presents an overview of the current state of scientific knowledge about social evolution in ants and shows how studies on ants have contributed to an understanding of many fundamental topics in behavioural ecology and evolutionary biology.

A Hundred Million Years and a Day - Jean-Baptiste Andrea 2020-06-16

Described as 'unforgettable' by *The Mail on Sunday*, *A Hundred Million Years and a Day* is a pocket-sized epic adventure story of a professor's journey to an Alpine glacier.

'Powerful' *Sunday Times* When he hears a story about a huge dinosaur fossil locked deep inside an Alpine glacier, university professor Stan finds a childhood dream reignited. Whatever it takes, he is determined to find the buried treasure. But Stan is no mountaineer and must rely on the help of old friend Umberto, who brings his eccentric young assistant, Peter, and cautious mountain guide Gio. Time is short: they must complete their expedition before winter sets in. As bonds are forged and tested on the mountainside, and the lines between determination and folly are blurred, the hazardous quest for the Earth's lost creatures becomes a journey into Stan's own past. This breathless, heartbreaking epic-in-miniature speaks to the adventurer within us all.
