Citrus - Giovanni Dugo
2002-09-12

The world production of citrus
fruit has risen enormously,
leaping from forty-five million
tons a year to eighty-five
million in the last 30 years.

Today, the potential
applications of their essential
oils are growing wider, with
nearly 40% of fresh produce
processed for industrial
purposes. Citrus: The Genus
Citrus offers comprehensive
coverage

**Illustrated Dictionary of
Automobile Body Styles, 2d
ed.** - Lennart W. Haajanen
2017-05-24

Cars today fit a fairly small
number of body types--sedan,
coupe, station wagon, SUV,
hatchback and a few others.
The meanings of these familiar
terms have changed over the
decades as automotive design
has evolved. Along the way, a
greater number of earlier body
types have fallen out of use and
become historical curiosities.
Who today can identify a
charabanc, a dos-a-dos or even
a phaeton? This expanded
second edition defines all
distinct body types since the
early days of the automobile,
many of which were derived
from horse-drawn vehicles.

Entries, many including clear line drawings, describe popular types and variations from different countries and time periods as well as terms for body components. Subtypes and subtle distinctions are explained and common misuses of terms and designations are clarified.

Vintage Cars, 1919-1930 - L.

History of a variety of cars and models available from the end of WWI to 1930, including such classics as the Model T in America and the Austin Seven in Britain.

The Automotive Industry and the Environment - P

Nieuwenhuis 2003-07-25

The automotive industry currently faces huge challenges. The fundamental technological paradigm it relies on, volume production, has become progressively more unprofitable in the face of increasingly segmented niche markets. At the same time it faces increasing regulatory and social pressures to improve both the sustainability of its products and methods of

production. Building on a wealth of research, The automotive industry and the environment addresses those challenges and how they can be met in producing a sustainable and profitable industry for the future. The authors first discuss the development of the automotive industry and the problems it currently faces. They then consider the solutions the industry can adopt. The book reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability. However, these technologies can only be fully exploited if methods of manufacture change. The book also describes models of decentralised production, particularly the micro factory retailing (MFR) model, which provide an alternative to volume production and promise to be both more sustainable and more profitable. The automotive industry and the environment provides both a

cogent diagnosis of the environmental and other problems facing the industry and a blueprint for a better future. It will be widely welcomed by the industry, policy makers and all those concerned with sustainable transport. Addresses the challenges facing the automotive industry, from the increasing unprofitability of volume production to regulatory and social pressures to improve environmental and product sustainability Examines how the automotive industry can meet the current challenges in producing a sustainable and profitable industry for the future Reviews trends in more environmentally-friendly technologies such as the use of more sustainable fuel sources and new types of modular design with built-in recyclability
