**Commodities and Capabilities** - Amartya Sen 1999-06-17

Commodities and Capabilities presents a set of inter-related theses concerning the foundations of welfare economics, and in particular about the assessment of personal well-being and advantage. The argument presented focuses on the capability to function, i.e. what a person can do or can be, questioning in the process the more standard emphasis on opulence or on utility. In fact, a person's motivation behind choice is treated here as a parametric variable which may or may not coincide with the pursuit of self-interest. Given the large number of practical problems arising from the roles and limitations of different concepts of interest and the judgement of advantage and well-being, this scholarly investigation is both of theoretical interest and practical import.

**States of Shock** - Bernard Stiegler 2015-02-17  
In 1944 Horkheimer and Adorno warned that

industrial society turns reason into rationalization, and Polanyi warned of the dangers of the self-regulating market, but today, argues Stiegler, this regression of reason has led to societies dominated by unreason, stupidity and madness. However, philosophy in the second half of the twentieth century abandoned the critique of political economy, and poststructuralism left its heirs helpless and disarmed in face of the reign of stupidity and an economic crisis of global proportions. New theories and concepts are required today to think through these issues. The thinkers of poststructuralism Lyotard, Deleuze, Derrida must be re-read, as must the sources of their thought, Hegel and Marx. But we must also take account of Naomi Klein's critique of Milton Friedman and the Chicago School and her account of the 'shock doctrine'. In fact, argues Stiegler, a permanent 'state of shock' has prevailed since the beginning of the industrial revolution, intensified by the creative destruction brought about by the consumerist model. The result has been a capitalism that destroys desire and reason and in which every institution is undermined, above all those institutions that are the products par excellence of the Enlightenment the education system and universities. Through a powerful critique of thinkers from Marx to Derrida, Stiegler develops new conceptual weapons to fight this destruction. He argues that schools and universities must themselves be transformed: new educational institutions must be developed both to take account of the dangers of

digitization and the internet and to enable us to take advantage of the new opportunities they make available.

*Adolescent Suicide* - Group for the Advancement of Psychiatry. Committee on Adolescence 1996

Even the most skilled therapist may underestimate suicide potential. Careful assessment and competent psychiatric intervention cannot always predict the suicidality of a particular person. *Adolescent Suicide* (GAP Report 140) presents techniques that allow psychiatrists and all those caring for the health and welfare of adolescents to respond to signals of distress with timely therapeutic intervention. It also suggests measures of anticipatory prevention. *Adolescent Suicide* presents an overview of adolescent suicidal behavior. It explores risk factors, the identification and evaluation of the suicidal adolescent, and approaches to therapy. It offers both historical and cross-cultural perspectives, the relevance of suicide to adolescent development, mental health training needs regarding suicidality, and related issues such as public health policies and medicolegal concerns. The risk of suicide presents a unique crisis in adolescent development. For this reason, all mental health professionals will find this report an indispensable tool in the treatment of adolescents at risk for suicide. Drawing from years of combined experience, this committee has applied its expertise on adolescent development to the sobering problem of suicide.

*Medicine and Health Care in Early Christianity* - Gary B. Ferngren 2016-08

Drawing on New Testament studies and recent scholarship on the expansion of the Christian church, Gary B. Ferngren presents a comprehensive historical account of medicine and medical philanthropy in the first five centuries of the Christian era. Ferngren first describes how early Christians understood disease. He examines the relationship of early Christian medicine to the natural and supernatural modes of healing found in the Bible. Despite biblical accounts of demonic possession and miraculous healing, Ferngren argues that early Christians generally accepted naturalistic assumptions about disease and cared for the sick with medical knowledge gleaned from the Greeks and Romans. Ferngren also explores the origins of medical philanthropy in the early Christian church. Rather than viewing illness as punishment for sins, early Christians believed that the sick deserved both medical assistance and compassion. Even as they were being persecuted, Christians cared for the sick within and outside of their community. Their long experience in medical charity led to the creation of the first hospitals, a singular Christian contribution to health care. "A succinct, thoughtful, well-written, and carefully argued assessment of Christian involvement with medical matters in the first five centuries of the common era . . . It is to Ferngren's credit that he has opened questions and explored them so astutely. This fine work looks forward as well as backward; it invites fuller reflection of the many senses in which medicine and religion intersect and merits wide readership."—*Journal of the American Medical Association* "In this superb work of historical and conceptual scholarship, Ferngren unfolds for the reader a cultural milieu of healing practices during the early centuries of Christianity."—*Perspectives on Science and Christian Faith* "Readable and widely researched . . . an important book for mission studies and American Catholic movements, the book posits the question of what can take its place in today's challenging religious culture."—*Missiology: An International Review* Gary B. Ferngren is a professor of

history at Oregon State University and a professor of the history of medicine at First Moscow State Medical University. He is the author of *Medicine and Religion: A Historical Introduction* and the editor of *Science and Religion: A Historical Introduction*.

**Purity, Sacrifice, and the Temple** - Jonathan Klawans 2009-05

Ancient Jewish sacrifice has long been misunderstood. Some find in sacrifice the key to the mysterious and violent origins of human culture. Others see these cultic rituals as merely the fossilized vestiges of primitive superstition. Some believe that ancient Jewish sacrifice was doomed from the start, destined to be replaced by the Christian eucharist. Others think that the temple was fated to be superseded by the synagogue. In *Purity, Sacrifice, and the Temple* Jonathan Klawans demonstrates that these supersessionist ideologies have prevented scholars from recognizing the Jerusalem temple as a powerful source of meaning and symbolism to the ancient Jews who worshiped there. Klawans exposes and counters such ideologies by reviewing the theoretical literature on sacrifice and taking a fresh look at a broad range of evidence concerning ancient Jewish

attitudes toward the temple and its sacrificial cult. The first step toward reaching a more balanced view is to integrate the study of sacrifice with the study of purity—a ritual structure that has commonly been understood as symbolic by scholars and laypeople alike. The second step is to rehabilitate sacrificial metaphors, with the understanding that these metaphors are windows into the ways sacrifice was understood by ancient Jews. By taking these steps—and by removing contemporary religious and cultural biases—Klawans allows us to better understand what sacrifice meant to the early communities who practiced it. Armed with this new understanding, Klawans reevaluates the ideas about the temple articulated in a wide array of ancient sources, including Josephus, Philo, Pseudepigrapha, the Dead Sea Scrolls, New Testament, and Rabbinic literature. Klawans mines these sources with an eye toward illuminating the symbolic meanings of sacrifice for ancient Jews. Along the way, he reconsiders the ostensible rejection of the cult by the biblical prophets, the Qumran sect, and Jesus. While these figures may have seen the temple in their time as tainted or even defiled, Klawans argues, they too—like practically all ancient Jews—believed in the cult, accepted its symbolic significance, and hoped for its ultimate efficacy.

**For a New Critique of Political Economy** - Bernard Stiegler 2010-11

The catastrophic economic, social and political crisis of our time calls for a new and original critique of political economy - a rethinking of Marx's project in the very different conditions of twenty-first century capitalism. Stiegler argues that today the proletariat must be reconceptualized as the economic agent whose knowledge and memory are confiscated by machines. This new sense of the term 'proletarian' is best understood by reference to Plato's critique of exteriorized memory. By bringing together Plato and Marx, Stiegler can show how a generalized proletarianization now encompasses not only the muscular system, as Marx saw it, but also the nervous system of the so-called creative workers in the information industries. The proletarians of the former are deprived of their practical know-how, whereas the latter are shorn of their theoretical practice, and both suffer from a confiscation of the very possibility of a genuine art of living. But the mechanisms at work in this new and accentuated form of proletarianization are the very mechanisms that may spur a reversal of the process. Such a reversal would imply a crucial distinction between one's life work, originating in otium (leisure devoted to the techniques of the self), and the job, consisting in a negotium (the negotiation and calculation, increasingly restricted to short-term expectations), leading to the necessity of a new conception of economic value. This short text offers an excellent introduction to Stiegler's work while at the same time representing a political call to arms in the face of a deepening economic and social crisis.

**Inequality Reexamined** - Amartya Sen  
1995-03-15

The noted economist and philosopher Amartya Sen argues that the dictum "all people are created equal" serves largely to deflect attention from the fact that we differ in age, gender, talents, and physical abilities as well as in material advantages and social background. He argues for concentrating on higher and more basic values: individual capabilities and freedom to achieve objectives. By concentrating on the equity and efficiency of social arrangements in promoting freedoms and capabilities of individuals, Sen adds an important new angle to arguments about such vital issues as gender inequalities, welfare policies, affirmative action,

and public provision of health care and education.

**A Chain of Voices** - Andre Brink 2007-09-01  
On a farm near the Cape Colony in the early nineteenth century, a slave rebellion kills three and leaves eleven others condemned to death. The rebellion's leader, Galant, was raised alongside the boys who would become his masters. His first victim, Nicholas van der Merwe, might have been his brother. As the many layers of Andre Brink's novel unfold, it becomes clear that the violent uprising is as much a culmination of family tensions as it is an outcry against the oppression of slavery. Spanning three generations and narrated in the voices of both the living and the dead, A Chain of Voices is reminiscent of William Faulkner's *Absalom, Absalom!*; it is a beautiful and haunting illustration of racism's plague on South Africa.

**Leonardo Pisano (Fibonacci)** - L. E. Sigler 2014-06-28

The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

*Farthest North* - Fridtjof Nansen 1898

In September of 1893, Norwegian zoologist Fridtjof Nansen and a crew manned the schooner Fram, intending to drift, frozen in the

Arctic pack-ice, to the North Pole. When it became clear that they would miss the pole, Nansen and his companion Hjalmar Johansen struck off by themselves. Racing the shrinking pack-ice, they attempted, by dog-sled, to go "farthest north." They survived a winter in a moss hut eating walrus and polar bears, and the public assumed they were dead. In the spring of 1896, after three years of trekking, and having made it to within four degrees of the pole, they returned to safety. Nansen's narrative stands with the best writing on polar exploration.
