Where Do Cities Come From and Where Are They Going To? Modelling Past and Present Agglomerations to Understand Urban Ways of Life - Francesca Fulminante 2021-01-25

Over the last decade, there has been a surge of interest in urbanization and economic development, sparked by the realization that making urban life sustainable is one of the greatest challenges facing us in the 21st century (this is now one of the core sustainable development goals of the United Nations). This has exerted considerable pressure on researchers to come up with more scientific ways of studying urbanism and economic activity over the long run, which has resulted not only in the development of new theoretical frameworks, but also in the collection of vast amounts of data from a range of settings. This has led to the realization that, although there are significant differences between settlements in different settings, there are nonetheless important regularities and commonalities between a diverse group of settlements in range of geographical and historical contexts, including both ancient and modern ones. This suggests that a common feature of settlements is their ability to generate increased social connectivity, greater division of labour and specialization, and enhanced technological invention and innovation, albeit with costs to levels of equality, quality of life, and standards of living, as well as impacts on the environment, which cannot be separated from the emergence of confederations and states and the creation of settlement systems, hierarchies and networks. We believe that this field of enquiry now stands at a critical juncture. Although it

is now feasible to talk about many aspects of ancient and modern urbanism with relative confidence, such as the numbers of cities or their sizes, much of the discussion of these themes within historical and archaeological circles has been on a discursive or qualitative level, while it is often difficult to harmonize the different models that have been applied to date into a consistent empirical and theoretical framework. A new approach to settlements throughout different contexts should now be within our grasp, however, thanks to both the ease with which information can be disseminated and the facilities that recent developments in IT offer us to model, analyse, and statistically test data.

The Universal Dictionary of Biography and Mythology - Joseph Thomas 2010-01-01

Once considered the largest and most extensive source of biographies in the English language, The Universal Dictionary of Biography and Mythology contains information on nearly every historical figure, notable name, and important subject of mythology from throughout the world prior to the 20th century. Spanning all fields of human effort-from literature and the arts to philosophy and science-and touching on topics from multiple areas of mythological study, including Norse, Greek, and Roman, this extraordinary reference guide continues to be one of the most thorough and accurate collections of biographical data ever created. Combining mythological and biographical entries into a single, comprehensive list, and incorporating a unique system of indicating pronunciation and orthography, The Universal Dictionary of Biography and Mythology offers readers an unparalleled record of historically significant identities, from the obscure and forgotten newsmakers of yesteryear to the highly celebrated shapers of history that remain influential today. Volume IV (PRO-ZYP) of this exquisite four-volume set includes information on such names as Roman critic and teacher of rhetoric Quintilian, Sir Walter Raleigh, Italian painter Raphael, Socrates, English novelist William Makepeace Thackeray, Ulysses, Leonardo da Vinci, Latin poet Virgil, American inventor Eli Whitney, Xerxes, Mormon priest Brigham Young, and Zeus, as well as sections dedicated to Christian names and disputed or doubtful pronunciations. JOSEPH THOMAS (1811-1891) also wrote A Comprehensive Medical Dictionary, various pronouncing vocabularies of biographical and geographical names, and a system of pronunciation for Lippincott's Pronouncing Gazetteer of the World.

The Vision of Rome in Late Renaissance France - Margaret M. McGowan 2000-01-01

"The French vision of Rome was initially determined by travel journals, guide books and a rapidly developing trade in antiquities. Against this background, Margaret McGowan examines work by writers such as Du Bellay, Grevin, Montaigne and Garnier, and by architects and artists such as Philibert de L'Orme and Jean Cousin, showing how they drew upon classical ruins and reconstructions not only to re-enact past meanings and achievements but also, more dynamically, to interpret the present. She explains how Renaissance Rome, enhanced by the presence of so many signs of ancient grandeur, provided a fertile source of artistic creativity. Study of the fragments of the past tempted writers to an imaginative reconstruction of whole forms, while the new structures they created in France revealed the artistic potency of the incomplete and the fragmentary.

Interpreting the Renaissance - Manfredo Tafuri 2006-01-01

"Tafuri studies the theory and practice of Renaissance architecture, offering new and compelling readings of its various social, intellectual, and cultural contexts while providing a broad understanding of uses of representation that shaped the entire era. He synthesizes the history of architectural ideas and projects through discussions of the great centers of architectural innovation in Italy (Florence, Rome, and Venice), key patrons from the middle of the fifteenth century (Pope Nicholas V) to the early sixteenth century (Pope Leo X), and crucial figures such as Leon Battista Alberti, Filippo Brunelleschi, Lorenzo de' Medici, Raphael, Baldassare Castiglione, and Giulio Romano. Interpreting the Renaissance is an essential book for anyone interested in the architecture and culture of fifteenth- and sixteenth-century Italy."--BOOK JACKET.
