**Breathing Space** - Gregg Mitman 2008-10-01

Allergy is the sixth leading cause of chronic illness in the United States. More than fifty million Americans suffer from allergies, and they spend an estimated \$18 billion coping with them. Yet despite advances in biomedicine and enormous investment in research over the past fifty years, the burden of allergic disease continues to grow. Why have we failed to reverse this trend? *Breathing Space* offers an intimate portrait of how allergic disease has shaped American culture, landscape, and life. Drawing on environmental, medical, and cultural history and the life stories of people, plants, and insects, Mitman traces how America's changing environment from the late 1800s to the present day has led to the epidemic growth of allergic disease. We have seen a never-ending stream of solutions to combat allergies, from hay fever resorts, herbicides, and air-conditioned homes to numerous potions and pills. But, as Mitman shows, despite the quest for a magic bullet, none of the attempted solutions has succeeded. Until we address how our changing environment—physical, biological, social, and economic—has helped to create America's allergic landscape, that hoped-for success will continue to elude us.

**Identification and motivation of high potentials to keep their intellectual property in the company** - Stefan Henkel 2014-02-01

The author has chosen the topic as it is becoming increasingly difficult to find, identify and motivate good employees, and to keep them in one's own company. The demand for high potentials is unimaginably high. In the end, it is in the interest of the company itself, not to lose the high potentials. Therefore, it is important to identify and motivate high potentials in order to retain them in the company. Primarily, this concerns the highly dedicated staff, but also the tacit knowledge of the employees that is not explicitly written down. The author starts with the introduction to the subject, and the exemplification of the problem. Moreover, the objectives are presented, and a demarcation issue is set. Then, it is shown how a simple method can identify high potentials. Chapter three describes the proper motivation of A-staff on the basis of a case study. The following chapter investigates the way to keep the previously identified employees in the company in order to exploit the existing potential, and further presents the top 10 employee retention tools. Thereby, the topic is also completed by a case study. A final conclusion collects all the previously mentioned points and ventures a prognosis for the future.

The Fundamental Principles of Finance - Robert Irons 2019-07-25

Finance is the study of value and how it is determined. Individuals, small businesses and corporations regularly make use of value determinations for making strategic decisions that affect the future outcomes of their endeavors. The importance of accurate valuations cannot be overestimated; valuing assets too highly will lead to investing in assets whose costs are greater than their returns, while undervaluing assets will lead to missed opportunities for growth. In some situations (such as a merger or an acquisition), the outcome of the decision can make or break the investor. The need for solid financial skills has never been more pressing than in today's global economy. The *Fundamental Principles of Finance* offers a new and innovative approach to financial theory. The book introduces three fundamental principles of finance that flow throughout the theoretical material covered in most corporate finance textbooks. These fundamental principles are developed in their own chapter of the book, then referred to in each chapter introducing financial theory. In this way, the theory is able to be mastered at a fundamental level. The interactions among the principles are introduced through the three precepts, which help show the impact of the three principles on financial decision-making. This fresh and original approach to finance will be key reading for undergraduate students of introduction to finance, corporate finance, capital markets, financial management and related courses, as well as managers undertaking MBAs.
