Advanced Problems in Mathematics: Preparing for University - Stephen Siklos 2016-01-25

This book is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge colleges as the basis for conditional offers. They are also used by Warwick University, and many other mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics is recommended as preparation for any undergraduate mathematics course, even for students who do not plan to take the Sixth Term Examination Paper. The questions analysed in this book are all based on recent STEP questions selected to address the syllabus for Papers I and II, which is the A-level core (i.e. C1 to C4) with a few additions. Each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to

scientific subjects at university level and for anybody interested in advanced mathematics.

**Economics A** - Andrew Sykes 2019-10-25

**Reinventing the Curriculum** - Mark Priestley 2013-06-20

Scotland's Curriculum for Excellence offers an example of a different approach to national curriculum development. It combines what are claimed to be the best features of top-down and bottom-up approaches to curriculum development, and provides an indication of the broad qualities that school education should promote rather than a detailed description of curriculum content. Advocates of the approach argue that it provides central guidance for schools and maintains national standards whilst at the same time allowing schools and teachers the flexibility to take account of local needs when designing programmes of education. Reinventing the Curriculum uses Scotland's Curriculum for Excellence as a rich case study, analysing the strengths and weaknesses of this approach to curriculum design and development, and exploring the implications for curriculum planning and development around the world.
