Modelli finanziari per la valutazione d'azienda - Luca Francesco Franceschi 2015-04-21

L'elaborazione di questo testo nasce dall'idea di organizzare in modo sistematico e organizzato in un unico supporto didattico i diversi argomenti valutativi trattati nell'ambito del corso di Finanza Aziendale II, tenuto da chi scrive presso la Facoltà di Economia dell'Università Cattolica del Sacro Cuore di Milano. Il disegno e

l'architettura del volume sono dunque influenzati dalle esigenze didattiche dell'insegnamento di cui si è detto, in quanto la primaria esigenza è stata tesa a realizzare un percorso formativo atto a illustrare e descrivere i modelli finanziari di valutazione delle aziende. Il progetto iniziale ha poi avuto uno sviluppo più articolato e approfondito in quanto diversi sono stati gli analisti finanziari coinvolti nell'elaborazione del volume e che hanno fornito un significativo contributo non solo dal punto di vista teorico, ma soprattutto sotto il profilo pratico-applicativo. Questo libro è stato così strutturato in due parti: una prima di carattere generale e una seconda, monografica, atta a illustrare l'applicazione dei metodi finanziari per valutare in concreto aziende operanti in diversi settori, tra loro eterogenei. Invero, la prima parte del volume è dedicata a descrivere i principali modelli con i quali trovano applicazione i metodi di valutazione finanziari, quelli di maggior impiego da parte dei practitioner, e a descrivere i relativi profili di analisi con un approccio semplice e principalmente operativo. Dapprima viene riportata la definizione delle diverse configurazioni di valore adottate in dottrina e dalla prassi (anche internazionale) e, successivamente, viene illustrato il percorso valutativo che un analista finanziario segue per l'elaborazione delle proprie stime a iniziare dall'analisi delle performance storiche mostrate nel tempo dall'azienda oggetto di stima. A seguire sono trattati i diversi modelli finanziari considerati e, precisamente, il Discounted Cash

Flow Model, il Dividend Discount Model, il Residual Income Model, l'Opzione Reale e i metodi empirici (cioè, i moltiplicatori (o multipli) di mercato basati sui prezzi rilevati in Borsa e nelle transazioni). La trattazione comprende anche le modalità di svolgimento dell'impairment test previsto dal principio contabile internazionale 36 (il noto IAS 36) che richiede l'implementazione del Discounted Cash Flow Model e dei metodi di mercato secondo modalità vincolate da alcune previsioni contenute nel predetto principio e che pone l'adozione di particolari accorgimenti valutativi. Nella seconda parte, sono riportate diverse valutazioni di imprese, mediante un profilo di esame che è proprio dell'analista finanziario. In quella sede trovano svolgimento valutazioni, predisposte con i medesimi formalismi di un report diretto agli investitori, relative a imprese: industriali, operanti in settori regolamentati, bancarie e assicurative. Ciò al fine di fornire una "panoramica" generale sull'implementazione e adattamento dei modelli finanziari in ordine a consentire l'apprezzamento del capitale di aziende con attività caratterizzate da specifiche peculiarità. Loose-Leaf Corporate Finance: Core Principles and Applications - Randolph W. Westerfield 2020-01-07

Corporate Finance: Core was developed for the graduate (MBA) level as a concise, up-to-date, and to-the-point product, the majority of which can be realistically covered in a single term or course. To achieve the objective of reaching out to the many different types of students and the varying course settings, corporate finance is distilled down to its core, while maintaining a decidedly modern approach. Purely theoretical issues are downplayed, and the use of extensive and elaborate calculations is minimized to illustrate points that are either intuitively obvious or of limited practical use. The goal was to focus on what students really need to carry away from a principles course. A balance is struck by introducing and covering the essentials, while leaving more specialized topics to follow-up courses. Net present value is treated as the underlying and unifying concept in corporate finance. Every subject covered is firmly rooted in valuation, and care is taken throughout to explain how particular decisions have valuation effects. Also, the role of the financial manager as decision maker is emphasized, and the need for managerial input and judgment is stressed.

2021-03-01

Fundamentals of Corporate Finance was designed and developed for a first course in business or corporate finance, for both finance majors and non-majors alike. The text is nearly self-contained in terms of background or prerequisites, assuming some familiarity with basic algebra and accounting concepts, while still reviewing important accounting principles very early on. The organization of this text has been developed to give instructors the flexibility they need. The best-selling text has three basic themes that are the central focus of the book: 1) An emphasis on intuition: the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach: net present value (NPV) is treated as the basic concept underlying corporate finance. 3) A managerial focus: the authors emphasize the role of the financial manager as a decision maker, and they stress the need for managerial input and judgment.

Second edition

Fundamentals of Investments - Charles J. Corrado 2005

Fundamentals of Investments was written to: 1. Focus on students as investment managers, giving them information they can act on instead of concentrating on theories and research without the proper context. 2. Offer strong, consistent pedagogy, including a balanced, unified treatment of the main types of financial investments as mirrored in the investment world. 3. Organize topics in a way that makes them easy to apply--whether to a portfolio simulation or to real life--and support these topics with hands-on activities. The approach of this text reflects two central ideas. First, there is a consistent focus on the student as an individual investor or investments manager. Second, a consistent, unified treatment of the four basic types of financial instruments--stocks, bonds, options, and futures--focusing on their characteristics and features, their risks and returns, and the markets in which they trade.
