Creating a Cash Cow in Kenya - Nat Robinson
2015-12-24

"What started as an eight-month assignment turned into a six-year adventure and the creation of a social business to help Kenya's farmers lift themselves out of poverty. The social business, Juhudi Kilimo, provides microloans to enable smallholder farmers to buy productive assets, such as cows, tools and so on. Since its foundation in 2009, Juhudi Kilimo has provided over 50,000 loans worth \$30 million and financed the purchase of 23,100 cows by some of Kenya's poorest farmers. In its six years Juhudi managed to rack up an impressive list of international investors The Rockefeller Foundation, The Ford Foundation, Acumen Fund, Soros Economic Development Fund, Grameen Foundation, Deutsche Bank and

Kiva.org. The company also won a Charles Schwab Social Entrepreneur of the Year Award and part of CIO Magazine's top 100 list. The challenges faced by the company in its early years reveal a dark underbelly of investor greed, corruption and the deep multicultural misunderstandings that can lead to conflicts.

The company was driven by a young entrepreneur from the US, who admits he had no idea what he was doing but learned along the way. The lessons he presents here can help guide those starting new ventures or trying to defy the odds with a new social business in East Africa. The business stories are intertwined with his adventures, racing camels, running from rhinos and much more."--Summary from Amazon.

Introduction to Psychology - 1939

"In contemplating a revision of our Psychology: a Factual Textbook, we turned for criticisms and suggestions to the psychologists who were known to be using the book. Very soon it became evident, with their replies in hand for analysis, that something more than a revision would be necessary to satisfy the needs of many teachers. Our aim in this new text has been to respond to

the temper of the times without losing the authority that comes with multiple authorship by experts, and equally without diminishing, we hope, the seriousness of the scientific approach to the problems of psychology. This new book is so much more than a revision of the old that we have given it a new title. In it we have turned the old book hind part to, beginning with the consideration of conduct and ending with the treatment of perception. The book is considerably enlarged, with some new chapters and some new collaborators. As was the case in the first book, these expert authors have formulated in the first instance the content of the chapters, but thereafter we as editors have freely exercised our right to alter their texts in the interests of unity in the whole." Why Everyone (Else) Is a Hypocrite - Robert Kurzban 2012-05-27

The evolutionary psychology behind human inconsistency We're all hypocrites. Why? Hypocrisy is the natural state of the human mind. Robert Kurzban shows us that the key to understanding our behavioral inconsistencies lies in understanding the mind's design. The human mind consists of many specialized units designed by the process of evolution by natural selection. While these modules sometimes work together seamlessly, they don't always, resulting in impossibly contradictory beliefs, vacillations between patience and impulsiveness, violations of our supposed moral principles, and overinflated views of ourselves. This modular,

evolutionary psychological view of the mind undermines deeply held intuitions about ourselves, as well as a range of scientific theories that require a "self" with consistent beliefs and preferences. Modularity suggests that there is no "I." Instead, each of us is a contentious "we"--a collection of discrete but interacting systems whose constant conflicts shape our interactions with one another and our experience of the world. In clear language, full of wit and rich in examples, Kurzban explains the roots and implications of our inconsistent minds, and why it is perfectly natural to believe that everyone else is a hypocrite.

How We Read Now - Naomi S. Baron 2021

"The digital revolution has transformed reading. Onscreen text, audiobooks, podcasts, and videos often replace print. We make these swaps for

pleasure reading, but also in schools. How We Read Now is a ringside seat to the impact of reading medium on learning. Teachers, administrators, librarians, and policymakers need to make decisions about classroom materials. College students must weigh their options. And parents face choices for their children. Digital selections are often based on cost or convenience, not educational evidence. Current research offers essential findings about how print and digital reading compare when the aim is learning. Yet the gap between what scholars and the larger public know is huge. How We Read Now closes the gap. The book begins by sizing up the state of reading today, revealing how little reading students have been doing. The heart of the book connects research insights to practical applications. Baron draws on work from international researchers, along with results from her collaborative studies of student reading practices ranging from middle school through college. The result is an impartial

view of the evidence, including where the jury is still out. The book closes with two challenges. The first is that students increasingly complain print is boring. And second, for all the educational buzz about teaching critical thinking, digital reading is inherently ill-suited for cultivating these habits of mind. Since screens and audio are now entrenched - and valuable - platforms for reading, we need to rethink how to help learners use them wisely"--

Psychological Perspectives on Justice - Barbara A. Mellers 2008-11-13

Justice, equity, and fairness are central concerns of everyday life. We frequently assess the fairness of individual acts, social programs, and institutional policies. This book explores how distributions of costs and benefits determine our intuitions about fairness. Some chapters examine the extent to which individual behavior deviates from normative theories of justice. This comparison requires an answer to the question of how fair distributions of resources or burdens should be made. Competing theories, such as utilitarianism and economic efficiency, are discussed. Other chapters investigate various rules and heuristics that people use to make fair distributions, the motivation for people to conform to rules of fairness even when they conflict with self-interest, differences between liberals and conservatives in their views about justice, rules that societies actually use to distribute or allocate critical or scarce resources, and implications for public policy. This mixture of theoretical and applied

perspectives provides a balanced look at the psychological underpinnings of justice. [The Psychology of Entrepreneurship](#) - Michael M. Gielnik 2020-12-30

2004-02-17

Leadership and associated power issues lie at the core of group life in a variety of contexts. Leadership and Power is a synthesis of contributions from eminent social psychologists and organizational scientists that addresses these issues from a fresh perspective. In recent years, these themes have been re-examined through the lens of social categorization approaches that highlight people's social identity and social roles as group members, as well as the processes that influence perceptions of and expectations about people and groups. The book is wide-ranging; chapters cover such diverse issues as: interpersonal versus group-oriented styles of leadership; leadership of totalist groups; political leadership;
