EBOOK: The First Year At University: Teaching Students In Transition - Bill Johnston 2010-01-16

If academics are genuinely to develop as teachers throughout their careers, if they are to continue to produce innovations, they have to bring a scholarly orientation to teaching. This series will show them how to do that. It will

teach them how to make credible cases for different forms of innovation, thus helping them to situate teaching centrally in their careers. It will also show them ways of solving students' problems and methods of helping their students to learn more effectively. THE FIRST YEAR AT UNIVERSITY Teaching Students in Transition The first year at university can be a very

challenging time for students especially in a mass system of higher education. Many students are ill- equipped to cope with life at university and retention is now a critical metric for all universities. This has resulted in universities having to spend considerable time and attention on ensuring that the 'first year experience' is as positive as possible for all students. This book offers a range of practical strategies, underpinned by relevant research, which lecturers can implement when charged with working with first year students in order to ease their transition to higher education. These strategies affect not only the design of courses, teaching and assessment but also how teams of lecturers provide consistent support, and how this in turn is supported by strategic planning at an institutional level. The First Year at University is a practical resource that can be used by a wide range of lecturers including those undertaking the PGCE (Higher Education) as well as those on CPD courses on teaching and

learning in higher education.

EBOOK: Making Policy in British Higher Education 1945-2011 - Michael Shattock 2012-10-16

"Every Mike Shattock book on higher education is worth keeping and re-reading. Making Policy

in British Higher Education 1945-2011 is a great story, very readable and full of wry humour. It is also a profoundly informative work that explains the policy and politics of higher education better than anything else that is available." Professor Simon Marginson, Centre for the Study of Higher Education, University of Melbourne, Australia "As expected, Michael Shattock's mastery of the history of higher education policy-making in the UK is evident in every page - the temptation is to say every paragraph. This is a demanding analysis. It is packed, precise, judicious and immensely informed ... As a narrative about how policy-making occurs in the long run, how to read the relevant archival and other documents closely and how to avoid the easy generalizations arising from ideological partis pris, this study is an instant classic." Sheldon Rothblatt, Professor of History Emeritus, University of California, Berkeley, USA "In the last 30 years Britain has experimented with some of the most innovative

higher education policies including academic quality assurance, research assessment, income contingent loan financing, tuition policy, information for students, and other efforts to stimulate competitive market forces. In this highly enlightening, meticulously researched, and fascinating history, university administrator and scholar Michael Shattock examines the individuals and financial policy drivers that have shaped British higher education from World War II to the present day and explores the impacts of these policies on the university sector." David D. Dill, Professor Emeritus of Public Policy, University of North Carolina at Chapel Hill, USA "Michael Shattock's important new book could not be better timed. He offers a detailed, nuanced and (above all) intelligent account of policy making in British higher education over the past 60 years ... This book reminds us that novelty is more often in the eye of the beholder than the historical record. It also warns us that those who have forgotten past events are often

fated to relive them - and that second (or third) time round is rarely an improvement." Peter Scott, Professor of Higher Education Studies, Institute of Education University of London, UK This book aims to provide an authoritative account of the evolution of policy in British higher education drawing extensively on previously untapped archival sources. It offers a comprehensive analysis of the policy drivers since 1945 and up to 2011 and of the extent to which even in the so called golden age of university autonomy in the immediate post War period the development of British higher education policy was closely integrated with government policies. In particular, it highlights how the role of the Treasury in determining the resource base for the expansion of student numbers is key to understanding many of the shifts in policy that occurred. This close engagement with government coupled with the historical acceptance of institutional autonomy defines the distinctiveness of the British higher

education system as compared with other countries. What the book also shows, however, is that policy was rarely driven directly by Ministers but emerged out of inter relationships between the Treasury, the responsible Department, the intermediary bodies, the higher education representative bodies and the research communities. The policy process was interactive rather than directed. The conclusions offer a new interpretation of the development of British higher education.

EBOOK: Children's Nursing Case Book - Tony Long 2016-08-16

Nursing children and young people is increasingly complex requiring nurses to apply their knowledge and skills to a wide scope of illnesses and situations. The challenges to nurses to analyse, reflect on different perspectives and then adapt practices to the benefit of service users are reflected in this book. Each scenario in this text is created based on real life cases and practice. The 23 cases connect knowledge with practice and guide you through the anatomy and physiology and the

physical and psychological responses to stressors, which are then linked to intervention decisions. Cases include:

- Providing care for children and young people with life-limiting conditions
- Acutely ill children including those with asthma, and an infant with pyrexia and febrile convulsions
- Long term conditions including diabetes, renal disease and the transfer to adult services
- Those who are critically ill such as a child with typhoid fever and a toddler with a head injury
- Supporting emotional and mental health in anorexia and autistic spectrum disorder
- Promoting healthy lifestyles, considering obesity and risky behaviour
- Care for children with trauma, including a child with a learning disability

Remaining vigilant for indicators of safeguarding concern, encouraging self-care, and promoting mental resilience are all incorporated, with examples from a range of care environments. Calculation exercises are interspersed to keep these skills sharp. This Case Book is an ideal

learning resource, tailored to help nurses learn in a focused way about practice and excel, whether on placements, in academic work, or in professional practice. "Developed from a partnership between a University Research Group and an NHS Trust, this practical children's nursing case textbook bridges theory and practice by presenting 23 case scenarios on complex, sensitive and difficult to manage clinical situations in an accessible and user-friendly manner. The inbuilt activities, calculation exercises, question and answer format and extra resources make this an excellent interactive resource for nurses to engage in critical thinking and reflection about each case." Dr. Veronica Lambert, Senior Lecturer Children's Nursing, Dublin City University, Ireland "This book will be useful for nurses in the UK who work with children and families in a variety of settings. Its format based on case studies and 'what would you do' and 'what do you need to do' scenarios will make it a

useful tool for teaching clinical care for children and families." Professor Linda Shields, School of Nursing, Midwifery and Indigenous Health, Charles Sturt University, Bathurst, Australia "What Tony Long has achieved is to produce a textbook with contributions from esteemed practicing children's nurses which gives enhanced credibility to each of the case studies. Tony and his colleagues have created these case studies to help children's and young people's nurses fully understand the complexities of the needs of both children and their families or carers during their healthcare trajectory. The contributors to this textbook fully appreciate that the specificity of knowledge and its application to practice across the parameters of healthcare delivery and across the life course healthcare journey of the child, from the neonatal period through to adolescent transition to adult healthcare, requires a specific knowledge source. This book reflects the reality that children's nurses work in many areas from

primary care through to tertiary care, from neonatal intensive care through to child and adolescent mental healthcare. Each of the case studies provides a focal point for this knowledge source and each seeks to illuminate good practice based on sound empirical evidence. The burden of ill health in childhood can only be alleviated if the nurses who deliver care to children and young people fully understand the complexities of ill health across the age continuum. This is because of what can happen during childhood, from conception onwards, ranging from obesity, heart disease and mental ill health, though to educational attainment and future economic status. Professor Long and his colleagues are to be congratulated in producing this new book which will address each of these cognate areas but which also never forgets the primary mission of the children's nurse which is to uphold their mantra of 'the child first and always'." Alan Glasper, Emeritus Professor of children's and young people's nursing at the

University of Southampton, UK

Copley's *Essentials of Accounting for*

Governmental and Not-for-Profit Organizations, 12e is best suited for those professors whose objective is to provide more concise coverage than what is available in larger texts. The main focus of this text is on the preparation of external financial statements which is a challenge for governmental reporting. The approach in this edition is similar to that used in practice. Specifically, day to day events are recorded at the fund level using the basis of accounting for fund financial statements. Governmental activities are recorded using the modified accrual basis. The fund-basis statements are then used as input in the preparation of government-wide statements. The preparation of government-wide statements is presented in an Excel worksheet.

Excel 2019 in Applied Statistics for High School Students - Thomas J. Quirk 2021-04-16

This textbook is a step-by-step guide for high school, community college, and undergraduate students who are taking a course in applied

statistics and wish to learn how to use Excel to solve statistical problems. All of the statistics problems in this book come from the following fields of study: business, education, psychology, marketing, engineering and advertising. Students will learn how to perform key statistical tests in Excel without being overwhelmed by statistical theory. Each chapter briefly explains a topic and then demonstrates how to use Excel commands and formulas to solve specific statistics problems. The book offers guidance in using Excel in two different ways: (1) writing formulas (e.g., confidence interval about the mean, one-group t-test, two-group t-test, correlation) and (2) using Excel's drop-down formula menus (e.g., simple linear regression, multiple correlations and multiple regression, and one-way ANOVA). Three practice problems are provided at the end of each chapter, along with their solutions in an appendix. An additional practice test allows readers to test their understanding of each

chapter by attempting to solve a specific statistics problem using Excel; the solution to each of these problems is also given in an appendix. This book is a tool that can be used either by itself or along with any good statistics book.

EBOOK: Enhancing Learning and Teaching in Higher Education: Engaging with the

Dimensions of Practice - John Lea 2015-08-16

The core purpose of this distinctive book is to offer academics working in higher education practical support in achieving formal accreditation of their teaching practice with the Higher Education Academy (HEA). It maps a range of key themes against the UKPSF (United Kingdom Professional Standards Framework) and invites readers to engage with the all-important dimensions of practice. This book is relevant both to those who are in the process of preparing an application for an HEA fellowship and to those who are preparing assignments they might be producing for a PG Cert (HE)

programme. The book explains the dimensions of practice in detail and offers readers suggestions for ways in which they might engage with particular aspects of the UK PSF at the end of each section and thus evidence the quality of their teaching practice. Each section also offers suggestions on ways to develop teaching as related to the themes. Its distinctive features include: Linking explicitly to the UK PSF (UK Professional Standards Framework) and offering practical advice to those making a fellowship application. Integrating this practical element with some of the wider debates about the purpose of higher education Incorporating a thread of student engagement throughout the book, including students' own perspectives on the themes of the book. Not only will the book support academics following an accreditation route, the book will also be a useful companion text on taught courses since the UK PSF is the overarching framework for people working in HE in a teaching capacity. Whether you are

working in higher education or working in college based higher education then this is the book for you.
