Influences from the Being's Inner Domain Book 3 - Racq Thah 2022-08-25

This is the third book in the series of Influences from the Inner Domain. All three books tell a story of the often-overlooked component of every being: their spirit domain, and why it is such a necessary component of all beings. The spirit domain is important for many reasons. It keeps us centered and on track through our journey around life's circular path. It orchestrates and coordinates the internal workings, communications, and for most of the existence of beings was the primary influence to the mind component. It provided the mind with materials from its stores of knowledge and experience to influence and guide it, since the beginning of time. Unlike the other components of a being, spirits never die. They are reassigned to a newborn, retaining all they have gathered through time to support past, present, and future beings. Spirits, from their domain, also influenced motion and movement from the being's physical component. This gave the being fuller flexibility, dexterity, and movement capabilities. Most important of all, it's in the spirit domain that life itself for each being is centered and originates. This last book in the series tells of how the spirit domain's influence diminishes over time and of the other internal components and influence becoming the more dominant drivers. It tells how the cost of this loss is great. As depicted in this third book the spirit domain continues to strive to contribute to the being's existence, but is much hampered through the fourth and final quadrant of life's circle to retain some contribution and an identity in determining who we are, how we act, and why we behave the way we do. There is still goodness and evil in this part of the stories, but more subtle from the spirits and their domains, and stronger from other influences from the being's inner domain. The magic and mystical begins to dissipate. The beings and the civilization prepare for the closing of life' circle. New ones will soon begin and follow.

Resources for Teaching Middle School Science - Smithsonian Institution 1998-04-30

With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. Resources for Teaching Middle School Science, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of Resources for Teaching Elementary School Science, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area--Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type--core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed--and the only guide of its kind--Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.
