**Destruction in the Performative** - 2016-08-09  
Cultural transformation tends to be described in

one of two ways: either with reference to what comes about, is created or emerges in the process of change or with reference to what is destroyed or obscured in that process. Within a performative paradigm, that is, from a perspective which focuses on the manner in which social and cultural reality is constituted or brought about by human activity, theorists have, in recent years, tended to underline the productive aspects of transformation by emphasising the creative thrust of performative processes and events. In so doing, this perspective has tended to overlook the extent to which a certain destructive element may in fact be inherent to such performative processes. Drawing upon a range of historical and contemporary constellations of socio-cultural change and a variety of different types of events and activities, the articles in this volume describe different forms of destruction and their respective role in processes of transformation. Their shared aim is to explore the manner in

which destructivity, such as the destabilisation and destruction of orders, subjects and bodies, can be grasped by concepts of performativity. In other words, to what extent may a certain destructive dynamic be inscribed within this very notion?

Bilingual First Language Acquisition - Annick De Houwer 2009-02-17

Increasingly, children grow up hearing two languages from birth. This comprehensive textbook explains how children learn to understand and speak those languages. It brings

together both established knowledge and the latest findings about different areas of bilingual language development. It also includes new analyses of previously published materials. The book describes how bilingually raised children learn to understand and use sounds, words and sentences in two languages. A recurrent theme is the large degree of variation between bilingual children. This variation in how children develop bilingually reflects the variation in their language learning environments. Positive attitudes from the people in bilingual children's language learning environments and their recognition that child bilingualism is not monolingualism-times-two are the main ingredients ensuring that children grow up to be happy and expert speakers of two languages.

This book is unique because it explores the

multilingual lexicon by providing insights from research studies conducted in psycholinguistics, applied linguistics and neurolinguistics. It goes beyond the use of two languages and thus concentrates on a new and developing area in linguistic research. The different perspectives provide a link to the mainstream work on the lexicon and vocabulary acquisition and will stimulate further debate in these areas and in the study of multilingualism.

**Animal Beauty** - Christiane Nusslein-Volhard  
2019-05-14

An illustrated exploration of colors and patterns in the animal kingdom, what they communicate, and how they function in the social life of animals. Are animals able to appreciate what humans refer to as “beauty”? The term scarcely ever appears nowadays in a scientific description of living things, but we humans may nonetheless find the colors, patterns, and songs of animals to be beautiful in apparently the same way that we see beauty in works of art. In *Animal Beauty*, Nobel Prize-winning biologist Christiane Nüsslein-Volhard describes how the colors and patterns displayed by animals arise, what they communicate, and how they function in the social life of animals. Watercolor drawings illustrate these amazing instances of animal

beauty. Darwin addressed the topic of ornament in his 1871 book *The Descent of Man and Selection in Relation to Sex*, and did not hesitate to engage with criteria of beauty, convinced that animals experienced color and ornament as attractive and agreeable in the same way that we do, and that the role this played in mate choice pointed to a “sexual selection” distinct from natural selection. Nüsslein-Volhard examines key examples of ornament and sexual selection in the animal kingdom and lays the groundwork for biological aesthetics. Noting that color patterns have not been a research priority—perhaps because they appeared to be nonessential luxuries rather than functional necessities—Nüsslein-Volhard looks at recent scientific developments on the topic. In part because of Nüsslein-Volhard's own research on the zebrafish, it is now possible to decipher the molecular genetic mechanisms that lead to production of colors in animal skin and its appendages and control its pattern and

distribution.

*Love as Passion* - Niklas Luhmann 2014-12-08  
In this important book Niklas Luhmann - one of the leading social thinkers of the late 20th century - analyses the emergence of 'love' as the basis of personal relationships in modern societies. He argues that, while family systems remained intact in the transition from traditional to modern societies, a semantics for love developed to accommodate extra-marital relationships; this semantics was then transferred back into marriage and eventually transformed marriage itself. Drawing on a diverse range of historical and literary sources, Luhmann retraces the emergence and evolution of the special semantics of passionate love that has come to form the basis of modern forms of intimacy and personal relationships. This classic book by Luhmann has been widely recognized as

a work of major importance. It is an outstanding contribution to social theory and it provides an original and illuminating perspective on the nature of modern marriage and sexuality.

**Phraseology in English Academic Writing** - Peter Andrew Howarth 1996-01-01

This study examines the use of prefabricated language (conventional lexical collocations) in the production of native and non-native writers of English. It first develops a framework for the description of restricted collocations and then reviews experimental research into the psycholinguistic processing of prefabricated language. Computer-based corpora of native and advanced non-native academic writing are analysed to discover to what extent and how such collocations are used in formal written English. Pedagogical implications are then considered, and the final part of the study examines the selection and presentation of restricted collocations in general and phraseological dictionaries for learners. The conclusion suggests that advanced learners need specialist collocational dictionaries, and the results of this research help to establish principles for the design of such dictionaries. *Current Issues in European Second Language Acquisition Research* - Bernhard Kettemann

*The Reception of Plato's ›Phaedrus‹ from Antiquity to the Renaissance* - Sylvain Delcomminette 2020-07-06

This volume explores the tremendous influence of Plato's Phaedrus on the philosophical, religious, scientific and literary discussions in the West. Ranging from Plato's first readers, over the Church Fathers and the Platonic commentators, to Byzantine and Renaissance thinkers, the papers collected here introduce the reader to the first two millennia of the dialogue's reception history. Thirteen contributions by both junior and established scholars study the engagement with the Phaedrus by such major

figures as Aristotle, Galen, Origen, Clemens of Alexandria, Plotinus, Augustine, Proclus, Psellus, Ficino, Erasmus, and many others. Together, they cover the wide range of topics discussed in the dialogue: the value of myth and allegory, religion and theology, love and beauty, the soul and its immortality, teaching and learning, metaphysics and epistemology, rhetoric and dialectic, as well as the role and the limits of writing. By placing the dialogue in this broad perspective, the volume will appeal to readers interested in the Phaedrus itself, as well as to classicists, literary theorists, and historians of philosophy, science and religion concerned with the dialogue's reception history and its main protagonists.

**A Practical Guide for Translators** - Geoffrey Samuelsson-Brown 2010-03-24

This is the fifth revised edition of the best-selling A Practical Guide for Translators. It looks at the

profession of translator on the basis of developments over the last few years and encourages both practitioners and buyers of translation services to view translation as a highly-qualified, skilled profession and not just a cost-led word mill. The book is intended principally for those who have little or no practical experience of translation in a commercial environment. It offers comprehensive advice on all aspects relevant to the would-be translator and, whilst intended mainly for those who wish to go freelance, it is also relevant to the staff translator as a guide to organisation of work and time. Advice is given on how to set up as a translator, from the purchase of equipment to the acquisition of clients. The process of translation is discussed from initial enquiry to delivery of the finished product. Hints are given on how to assess requirements, how to charge for work, how to research and use source material, and how to present the finished product. Guidance is given

on where to obtain further advice and professional contacts. This revised edition updates practices in the translation profession and considers the impact of web-based translation offerings. Industry and commerce rely heavily on the skills of the human translator and his ability to make intellectual decisions that is, as yet, beyond the capacity of computer-aided translation.

*Systems Thinking* - Piero Mella 2012-06-07

The core belief underlying this book is that the most useful and effective models to strengthen our intelligence are system ones, developed following the logic of Systems Thinking. Such models can explore complexity, dynamics, and change, and it is the author's view that intelligence depends on the ability to construct models of this nature. The book is designed to allow the reader not only to acquire simple information on Systems Thinking but above all to

gradually learn the logic and techniques that make this way of thinking an instrument for the improvement of intelligence. In order to aid the learning and practice of the Systems Thinking discipline, the author has abandoned a rigid formal language for a more discursive style. He writes in the first person, with an ample number of citations and critical analyses, and without ever giving in to the temptation to use formal mathematics.

**L3 Syntactic Transfer** - Tanja Angelovska  
2017-08-15

This book fills an existing gap in the field of third language acquisition (L3A) by bringing together theoretical, empirical, and practical accounts that contribute to informed teaching practices in multilingual classrooms. The volume is organised into three sections that focus on prominent syntactic transfer models in the field of L3A and together provide insights into the

interplay of the influences of prior languages in L3 syntax and how we can enrich the practical field of instructed L3 acquisition. Part I includes original papers dealing with new developments of existing theoretical models on syntactic transfer in L3A and Part II consists of empirical studies testing existing models from different perspectives (formal, lexico-functional, and neurocognitive). Following these two sections, Part III discusses how theory can inform practices for L3 learning and teaching. This concise compilation brings to light innovations, not only in terms of theoretical refinements and practical implementations, but also in offering an impressive range of language combinations. This book is intended to act as a unique resource for scholars, applied linguists, language educators, both novices and experts alike, in and beyond the field of L3A.

Thinking Without a Banister - Hannah Arendt  
2021-02-23

Hannah Arendt was born in Germany in 1906 and lived in America from 1941 until her death in 1975. Thus her life spanned the tumultuous years of the twentieth century, as did her thought. She did not consider herself a philosopher, though she studied and maintained close relationships with two great philosophers—Karl Jaspers and Martin Heidegger—throughout their lives. She was a

thinker, in search not of metaphysical truth but of the meaning of appearances and events. She was a questioner rather than an answerer, and she wrote what she thought, principally to encourage others to think for themselves. Fearless of the consequences of thinking, Arendt found courage woven in each and every strand of human freedom. In 1951 she published *The Origins of Totalitarianism*, in 1958 *The Human Condition*, in 1961 *Between Past and Future*, in 1963 *On Revolution and Eichmann in Jerusalem*, in 1968 *Men in Dark Times*, in 1970 *On Violence*, in 1972 *Crises of the Republic*, and in 1978, posthumously, *The Life of the Mind*. Starting at the turn of the twenty-first century, Schocken Books has published a series of collections of Arendt's unpublished and uncollected writings, of which *Thinking Without a Banister* is the fifth volume. The title refers to Arendt's description of her experience of thinking, an activity she indulged without any of the traditional religious, moral, political, or

philosophic pillars of support. The book's contents are varied: the essays, lectures, reviews, interviews, speeches, and editorials, taken together, manifest the relentless activity of her mind as well as her character, acquainting the reader with the person Arendt was, and who has hardly yet been appreciated or understood.
