*Tourism in Latin America* - Alexandre Panosso Netto 2014-09-04

This book presents eleven case studies of success about Latin America tourism. The cases are embedded in a framework describing the economic and cultural foundations of tourism development in the continent. Mexico, Brazil, Chile and Costa Rica are some of the Latin countries which have become examples and models for touristic development, respect for the environment and social inclusion. The book showcases some of the best practices, along with an analysis of how these projects helped improving the environmental and social surroundings and how return on investments has been ensured. Latin America is shown as an excellent example, with the Gross Domestic Product of the continent expanding intensely in the tertiary sector like leisure, hospitality, travel, tourism, entertainment, gastronomy, events

and indoor and outdoor recreation. This book is a valuable resource both for professionals in the tourism industry and for researchers in tourism management.

System Identification - R. Isermann 2014-05-23

System Identification is a special section of the International Federation of Automatic Control (IFAC)-Journal Automatica that contains tutorial papers regarding the basic methods and procedures utilized for system identification. Topics include modeling and identification; step response and frequency response methods; correlation methods; least squares parameter estimation; and maximum likelihood and prediction error methods. After analyzing the basic ideas concerning the parameter estimation methods, the book elaborates on the asymptotic properties of these methods, and then investigates the application of the methods to particular model structures. The text then discusses the practical aspects of process identification, which includes the usual, general procedures for process identification; selection of input signals and sampling time; offline and on-line identification; comparison of parameter estimation methods; data filtering; model order testing; and model verification. Computer program packages are also discussed. This compilation of tutorial papers aims to introduce the newcomers and non-specialists in this field to some of the basic methods and procedures used for system identification.

**The Tales of Swaggy Joe** - Kg. Lyle 2014-12-16

It all started in the 1970s when my own children were on the threshold of adulthood. The Roving Roo adventures were created around 1989 after a trip to the USA, where my daughter introduced me to a mascot named Kirby Kangaroo. Swaggy Joe became the romantic character of my childhood—when itinerant workers still walked the roads. I have fond memories of some of them, notably an old timer of Bacchus Marsh, Victoria, named Brian Rice, who my Grandma Lyle employed in exchange for food and rudimentary accommodation in the back shed. Another was a chap named Ruben Webb, who my dad gave work to at our home. He worked well and then wandered his way. Great icons of honesty, integrity, and the freedom to live as they would were both of these men

and others of their ilk. I recognize that the normal way of life for me as a child has slipped by as prosperity and technology altered what my grandchildren know as their way of life. I felt that it could assist the new generations if they could be given some insights into life as it once was before their time, albeit in romantic tales of the imagination. For me to express this, I found the lyric ballad came naturally to be the utility of sharing. Although untrained as a writer and communicator, the urge to share a little of “what was” or “maybe was” prompted this little booklet. I hope that the readers, those young and those not so, enjoy the unique sharing reading provides.

*Learning with Information Systems* - Simon Bell 2013-02-01

In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

*Working Towards Sustainable Development* - International Labour Organization 2012

A green economy is necessary if sustainable development is to be realised. However, as this report emphasizes, a green economy can also,

if accompanied by the right policy mix, create more and better jobs, lift people out of poverty and promote social inclusion. In fact, the growth model of the past few decades has been inefficient, not only economically, but also from environmental, employment and social perspectives. It overuses natural resources, is environmentally unsustainable and has failed to meet the aspirations of a large proportion of society seeking productive, decent work and dignified lives. A new development model - one which puts people, fairness and the planet at the core of policy-making - is urgently needed, and is eminently achievable. More fundamentally, this report demonstrates that employment and social inclusion must be integral parts of any sustainable development strategy and must be included in policies that address climate change and ensure the preservation of the environment. In particular, the report assesses the sectoral, employment and income implications of the transition to a green economy. It highlights the necessary conditions, policy prescriptions and good practices required to ensure that the green economy is characterized by gains in job quality, reductions in poverty and improvements in social inclusion.

*Wain-Roy and the Invention of the Backhoe* - Lee Horton 2018-06-21

In 1947 Vaino J. Holopainen (Waino) and Roy E. Handy Jr. of the small town of Hubbardston, Massachusetts developed the world's first backhoe. This revolutionary invention that could dig and load by swinging side to side, was also the world's first all hydraulically actuated and controlled machine for digging. Vaino and Roy then formed Wain-Roy Corporation. Their grassroots contribution to the earth moving industry lead to the development of twenty-six major backhoe related break-through designs, including the tractor loader backhoe, which formed the worldwide multi-billion-dollar industry that we know today. The amazing story of Wain-Roy and the invention of the backhoe is one of inspiration, struggle, genius, success, theft and failure. Credit for the backhoe is often given to other larger outfits who no-doubt fueled the rise of its widespread use. Few people alive still remember the greatest triumphs and failures of the true inventors and innovators of first backhoe and the first all-hydraulic digger. Authors Lee Horton and Dave Willens, two engineers from Central Massachusetts, wanted to capture this fascinating history before it was lost to time.

**Artificial Intelligence** - John Adamssen 2020-08-03

Can machines write books? Can artificial intelligence be used for business? Will touch screens be around, or will they be replaced by voice recognition? What are deepfakes? How do self-driving cars work, and are they going to be a reality soon? These questions all come to light in this brief but informational book about artificial intelligence. Society is changing quickly because of automated systems in place that either benefit or undermine people's living style, jobs, and brains. Today, we explore what that future may hold. We will also look into options for civilians in today's modern world to adapt more quickly. Don't underestimate the rise of artificial intelligence. Understand the future. Reason, Tradition, and the Good - Jeffery Nicholas 2012

In *Reason, Tradition, and the Good*, Jeffery L. Nicholas addresses the failure of reason in modernity to bring about a just society, a society in which people can attain fulfillment. Developing the critical theory of the Frankfurt School, Nicholas argues that we rely too heavily on a conception of rationality that is divorced from tradition and, therefore, incapable of judging ends. Without the ability to judge ends, we cannot

engage in debate about the good life or the proper goods that we as individuals and as a society should pursue. Nicholas claims that the project of enlightenment—defined as the promotion of autonomous reason—failed because it was based on a deformed notion of reason as mere rationality, and that a critical theory of society aimed at human emancipation must turn to substantive reason, a reason constituted by and constitutive of tradition. To find a reason capable of judging ends, Nicholas suggests, we must turn to Alasdair MacIntyre's Thomistic-Aristotelianism. Substantive reason comprises thinking and acting on the set of standards and beliefs within a particular tradition. It is the impossibility of enlightenment rationality to evaluate ends and the possibility of substantive reason to evaluate ends that makes the one unsuitable and the other suitable for a critical theory of society. Nicholas's compelling argument, written in accessible language, remains committed to the promise of reason to help individuals achieve a good and just society and a good life. This requires, however, a complete revolution in the way we approach social life. "Jeffery Nicholas has written an important and valuable book that invites its readers to discover the difficulties of late modern Western thought from the perspective of twentieth-century critical theory, and to consider a response to those difficulties drawn from the work of Alasdair MacIntyre and Charles Taylor." —Christopher Stephen Lutz, Saint Meinrad Seminary and School of Theology

**Integrating Project Delivery** - Martin Fischer 2017-03-27

A revolutionary, collaborative approach to design and construction project delivery Integrating Project Delivery is the first book-length discussion of IPD, the emergent project delivery method that draws on

each stakeholder's unique knowledge to address problems before they occur. Written by authors with over a decade of research and practical experience, this book provides a primer on IPD for architects, designers, and students interested in this revolutionary approach to design and construction. With a focus on IPD in everyday operation, coverage includes a detailed explanation and analysis of IPD guidelines, and case studies that show how real companies are applying these guidelines on real-world projects. End-of-chapter questions help readers quickly review what they've learned, and the online forum allows them to share their insights and ideas with others who either have or are in the process of implementing IPD themselves. Integrating Project Delivery brings together the owners, architect, engineers, and contractors early in the development stage to ensure that problems are caught early, and to address them in a collaborative way. This book describes the parameters of this new, more efficient approach, with expert insight on real-world implementation. Compare traditional procurement with IPD Understand IPD guidelines, and how they're implemented Examine case studies that illustrate everyday applications Communicate with other IPD adherents in the online forum The IPD approach revolutionizes not only the workflow, but the relationships between the stakeholders - the atmosphere turns collaborative, and the team works together toward a shared goal instead of viewing one another as obstructions to progress. Integrated Project Delivery provides a deep exploration of this approach, with practical guidance and expert insight.

**Bell Beaker Settlement of Europe** - Alex M. Gibson 2019-04

European studies of the Bell Beaker phenomenon have concentrated on burial and artifacts that constitute its the most visible aspects. This volume concentrates on the domestic sphere - assemblage composition, domestic structures (how they differ, if at all, from previous types, legacies), and provides the first pan-European synthesis of its kind. It is a Europe-wide survey and analysis of Bell Beaker settlement structures; this is particularly important as we cannot understand the Bell Beaker phenomenon by analyzing graves alone. Neither should we view Bell Beakers in isolation but must consider the effect that they had on already

existing Late Neolithic cultures in the areas in which they appear. This volume is therefore intended to view the settlement aspect of Bell Beakers in context throughout Europe. It is the text book for Chalcolithic settlements and society. Contributors to the 19 papers belong to Europe-wide affiliation of experts specializing in Bell Beakers and the Chalcolithic (Archeologie et Gobelets) which addresses common pan-European issues surrounding the appearance and spread of Bell Beakers. This book summarizes that data from the UK and many of the continental European countries; an increasingly important element of Beaker studies following recent isotopic and DNA evidence showing that the phenomenon was a result of human migration and not that of cultural ideas, trade and ideology. Each chapter deals with a defined region or country and is fully illustrated, including a corpus of Beaker houses and comparing them with Late Neolithic domestic structures where they are known to exist. The following themes will be addressed: 1. Regional syntheses in the UK and in Europe 2. What native cultures existed before the arrival of Bell Beakers? 3. What domestic ceramics were being used before the arrival of Bell Beakers? 4. What stone and flint types were in use? 5. What did pre-Bell Beaker houses look like? What size were they? 6. What (if any) changes to 1-4 above resulted after the appearance of Bell Beakers?

**Notwithstanding** - Louis de Bernieres 2016-10-18

As the world around it marches forward, the bucolic English village of *Notwithstanding* remains unchanged. It is, as it always has been, a place of pubs and cricket pitches, where local eccentrics—a retired colonel who has eschewed clothes, a spiritualist living with the ghost of her husband, and a dog named Archibald Scott-Moncrieff—almost fit in. In this delightfully evocative collection of stories, in which a young couple falls in and out of love by letter alone, an eleven-year-old boy battles a monstrous fish, and a man of the cloth has a premonition of death, Louis de Bernières conjures up a rural idyll long since forgotten. Funny, bittersweet, and deeply felt, *Notwithstanding* is the bestselling author of *Corelli's Mandolin* at his most enchanting.
