Occupational Injuries From Electrical Shock and Arc Flash Events - Richard B. Campbell 2016-09-02

This brief presents information on occupational injuries from electric shock and arc flash events through a review of literature, electrical incident data, and similar sources. It includes pertinent information such as the nature of the incident, adherence to safety requirements, use of appropriate personal protective equipment (PPE), and extent of injury. Chapters address arc flash and shock hazards, and the need for empirical incident data on the actual hazards that may be experienced when equipment faults or adverse electrical events occur. Certain tasks

where the risk of an arc flash or shock hazard may be lower, such as normal operation of properly installed and maintained equipment, may not require the use of any special PPE. Some of this risk reduction is based on anecdotal data, and the brief details why future research challenges will need more empirical incident data on the actual hazards and associated injuries that may be experienced when equipment faults or adverse electrical events occur. Designed for professionals and researchers in fire protection engineering, workplace electrical tasks, or workplace safety, this brief offers a thorough overview of the trends in electrical injuries and the costs related to those injuries.

The Double Burden of Malnutrition - Food and Agriculture Organization 2006

In several developing countries, undernourishment is still prevalent while obesity and its related co-morbidities, including chronic non-communicable diseases (NCDs) such as heart disease, diabetes and cancer, are emerging and contributing increasingly to morbidity and mortality. Several countries are now facing a double burden of malnutrition, i.e. caloric (energy) and micronutrient deficiencies and, at the same time, obesity and diet-related chronic diseases. This "nutrition transition" is associated with rapid economic development, urbanization and global changes, which lead to shifts towards a more energy dense diet, including more fat and sugar and more processed foods, and at the same time dramatic

alterations in physical activity patterns and lifestyles. While infectious diseases and maternal and child undernutrition continue to take an enormous toll in lives and health worldwide, the rapid rise of NCDs represents one of the major health challenges to global development in the twenty-first century and threatens economic and social development of nations as well as the lives and health of millions globally. This publication explores the situation of the double burden of malnutrition in six geographically and culturally diverse case study countries and presents conclusions and recommendations from a follow-up workshop with the case study authors.

Status and Dynamics of Forests in Germany

- Nicole Wellbrock 2019-01-01

This book is an open access publication. Forest ecosystems in Central Europe are changing as a result of anthropogenic influences and changing climate conditions. As such, a large-scale monitoring programme was undertaken in order to understand the influence of site modification, deposition of air pollutants, and climate. This book presents the scientific findings of this study for Germany, including the major challenges with regard to the future preservation and management of forest ecosystems under environmental change. In addition, it addresses a number of central questions: what are the main factors affecting forest stands and soil integrity? How, and how rapidly, are forest ecosystems changing? How diverse are the

changes across Germany? What will be the main risks in sustainable forest management in the future? And how can policy support the development and maintenance of adaptive and resilient forests that provide essential ecosystem services, today and in the future? Helping readers understand the importance of soils and related ecosystem processes for future sustainable forestry, and sharing essential findings on environmental change and related changes in forest status and dynamics, the book is a valuable resource for researchers and policymakers interested in science-based decisions.

Recent Advances in Iron Catalysis - Hans-Joachim Knölker 2020-09-28

Transition metal-catalyzed reactions play a key role in many transformations of synthetic organic chemistry. For most of these reactions, noble metals, for example, palladium, have been used as catalysts. Over the last two decades, more and more first row transition metals have been applied as catalysts for organic reactions,

with iron taking the center stage. The driving forces behind this development are not only the high costs for the noble metals but also their toxicity. Iron is the most abundant transition metal in the Earth's crust, and thus, it is considerably cheaper than the precious noble metals. Moreover, iron compounds are involved in many biological processes, and thus, iron exhibits a low toxicity. Because of this low toxicity, iron-catalyzed reactions are important for an environmentally benign sustainable chemistry. However, iron catalysts are not only investigated to replace noble metals; they offer many applications in synthesis beyond those of classical noble metal catalysts. Several articles of the present book emphasize the complementarity of iron-catalyzed reactions as compared to reactions catalyzed by noble metals. The book shows intriguing recent developments and the current standing of iron-catalyzed reactions as well as applications to organic synthesis.
