This book discusses the role of human personality in the study of behavioral cybersecurity for non-specialists. The book presents profiling approaches, offers case studies of major cybersecurity events and provides analysis of password attacks and defenses. Discussing psychological methods used to assess behavioral cybersecurity, alongside risk management, the book also describes game theory and its applications, explores the role of cryptology and steganography in attack and defense scenarios and brings the reader up to date with current research into motivation and attacker/defender personality traits. Written for practitioners in the field, alongside nonspecialists with little prior knowledge of cybersecurity, computer science, or psychology, the book will be of interest to all who need to protect their computing environment from cyber-attacks. Neuroscience for Teachers - Richard Churches 2017-09-18

Foreword by Baroness Susan Greenfield CBE. In Neuroscience for Teachers: Applying Research Evidence from Brain Science, Richard Churches, Eleanor Dommett and Ian Devonshire expertly unpack, in an easy-to-read and instantly useable way, what every teacher needs to

know about the brain and how we really learn and what that suggests for how they should teach. Everyone is curious about the brain including your learners! Not only can knowing more about the brain be a powerful way to understand what happens when your pupils and, of course, you pick up new knowledge and skills, but it can also offer a theoretical basis for established or new classroom practice. And as the field of neuroscience uncovers more of nature's secrets about the way we learn and further augments what we already know about effective teaching this book advocates more efficient pedagogies rooted in a better understanding and application of neuroscience in education. By surveying a wide range of evidence in specific areas such as metacognition, memory, mood and motivation, the teenage brain and how to cater for individual differences, Neuroscience for Teachers shares relevant, up-to-date information to provide a suitable bridge for teachers to transfer the untapped potential of neuroscientific findings into practical classroom approaches. The key issues, challenges and research are explained in clear language that doesn't assume a prior level of knowledge on the topic that would otherwise make it inaccessible therefore enabling more teachers to better comprehend the lessons from neuroscience while the authors also take care to expose the ways in which 'neuromyths' can arise in education in order to help them avoid these pitfalls. Laid out in an easy-to-use format, each chapter features: 'Research Zones' highlighting particular pieces of research with a supplementary insight into the area being explored; 'Reflection' sections that give you something to think about, or suggest something you might try out in the classroom; and concluding 'Next steps' that outline how teachers might incorporate the findings into their own practice. The authors have also included a glossary of terms covering the book's technical vocabulary to aid the development of teachers' literacy in the field of neuroscience. Packed with examples and research-informed tips on how to enhance personal effectiveness and improve classroom delivery, Neuroscience for Teachers provides accessible, practical guidance supported by the latest research evidence on the things that will help your learners to learn better. Suitable for LSAs, NQTs, teachers, middle leaders, local authority advisers and anyone working with learners.

**Childhood Temporary Separation** - J.S.M. Rusby 2008-03

This study investigates possible links between temporary separation from parents in childhood due to evacuation in World War 2 and later psychological development and adult relationships. The conclusions from an earlier qualitative pilot study had suggested that the developmental outcome of evacuation was perceived by those involved as lying on a continuum, at one extreme the experience was 'life-enhancing' and at the other it had left an 'emotional legacy' depending on an individual's experience. This present lifespan survey using self report questionnaires and involving 900 respondents from the county of Kent confirmed these perceptions and examined whether they were reflected by measures of mental health, marital history and adult attachment. The methodology employed univariate and multivariate analyses, including causal structural models of depression for both sexes, and involved both childhood and life-course mediating variables. In terms of mental health highly significant associations were found for the evacuation experience variables of Age at Evacuation and Care Received with the Incidence of Depression, Clinical Anxiety and Factor 2, Self-criticism, of the Depressive Experiences Questionnaire (Blatt et al., 1976), all in the predicted sense. Females were found to be particularly vulnerable to Clinical Anxiety if evacuated at 10-12 years with an incidence of 18%, accompanied by a high level of Self-criticism. Structural path models for the onset of depression confirmed that females not only had higher levels of Factor 1, Dependency, but were more vulnerable to these levels. Divorce rates were also highly associated with these same evacuation variables and multiple divorce rates for both sexes fell from 10%, if evacuated at 4-6 years, to 0% for those evacuated at 13-15 years. Adult attachment style measured by the self-report Relationship Questionnaire (Bartholomew & Horowitz, 1991) was also affected, with a fall in the Fearful style from 25% to 7% with increasing age at evacuation. Overall there was a tendency for male respondents to move to the Dismissive and females to the Fearful styles when secure attachment was lost. It is believed that such a lifespan development study, based on an 'experiment in nature' and involving an ageing cohort, has potential value in influencing future policy in the fields of mental health and social care.

**Psychology and Sociology Applied to Medicine** - Beth Alder 2009-06-17

This textbook in the Illustrated Colour Text series offers an integrated treatment of sociology and psychology for medical students. It is presented in a much more colourful and graphic format than is usual for books on these two subjects. This integration reflects the tendency to teach these two subjects together as "behavioural science", with an increased stress on the place of medicine in society, and on illness as a product of psychological and social circumstances rather than merely a biological phenomenon. The book reflects these trends and has been successful and popular with students. An integrated treatment of psychology and sociology for medical students - in line with the trend towards teaching these subjects as "behavioural sciences". Use of case studies and "Stop/Think" boxes encourages critical thinking and discussion. Graphic Illustrated Colour Text presentation style enlivens a subject which most medical students are not keen on. This third edition contains a new introduction on the importance and key features of the biopsychosocial model and additional double-page spreads on International Health and Rural Health.

*Mistakes Were Made (but Not By Me) Third Edition* - Carol Tavis 2020-04-28

A NEW EDITION UPDATED IN 2020 • Why is it so hard to say "I made a mistake" — and really believe it? When we make mistakes, cling to outdated attitudes, or mistreat other people, we must calm the cognitive dissonance that jars our feelings of self-worth. And so, unconsciously, we create fictions that absolve us of responsibility, restoring our belief that we are smart, moral, and right—a belief that often keeps us on a course that is dumb, immoral, and wrong. Backed by decades of research, *Mistakes Were Made (But Not by Me)* offers a fascinating explanation of self-justification—how it works, the damage it can cause, and how we can overcome it. Extensively updated, this third edition has many recent and revealing examples, including the application of dissonance theory to divisive social issues such as the Black Lives Matter movement and he said/she said claims. It also features a new chapter that illuminates how cognitive dissonance is playing a role in the currently polarized political scene, changing the nation's values and putting democracy itself at risk. "Every page sparkles with sharp insight and keen observation. Mistakes were made—but not in this book!" —Daniel Gilbert, author of *Stumbling on Happiness* "A revelatory study of how lovers, lawyers, doctors, politicians—and all of us—pull the wool over our own eyes . . . Reading it, we recognize the behavior of our leaders, our loved ones, and—if we're honest—ourselves, and some of the more perplexing mysteries of human nature begin to seem a little clearer." —Francine Prose, *O, The Oprah Magazine*

**Learning to Use Statistical Tests in Psychology** - Judith Greene 1999

The second edition of this text is an introduction to the use of statistical tests in psychology experiments: statistics without panic. Presented in a new textbook format, its key objective is to enable students to select appropriate statistical tests to evaluate the significance of data obtained from psychological experiments. Improvements in the organization of chapters emphasize even more clearly the principle of introducing complex experimental designs on a need to know basis, leaving more space for an extended interpretation of analysis of variance. In an important development for the second edition, students are introduced to modern statistical packages as a useful tool for calculations, the emphasis being on understanding and interpretation.

**The Psychopath Test** - Jon Ronson 2011-05-12

In this madcap journey, a bestselling journalist investigates psychopaths and the industry of doctors, scientists, and everyone else who studies them. The Psychopath Test is a fascinating journey through the minds of madness. Jon Ronson's exploration of a potential hoax being played on the world's top neurologists takes him, unexpectedly, into the heart of the madness industry. An influential psychologist who is convinced that many important CEOs and politicians are, in fact, psychopaths teaches Ronson how to spot these high-flying individuals by looking out for little telltale verbal and nonverbal clues. And so Ronson, armed with his new psychopath-spotting abilities, enters the corridors of power. He spends time with a death-squad leader institutionalized for mortgage fraud in Cocksackie, New York; a legendary CEO whose psychopathy has been speculated about in the press; and a patient in an asylum for the criminally insane who insists he's sane and certainly not a psychopath. Ronson not only solves the mystery of the hoax but also discovers, disturbingly, that sometimes the personalities at the helm of the madness industry are, with their drives and obsessions, as mad in their own way as those they study. And that relatively ordinary people are, more and more, defined by their maddest edges.

**PSYCHOLOGY: Research Innovations in young minds** - Dr Aneesh V Appu & Dr Subha Sachithanand 2020-09-23

For the past years, more emphasis has been given in understanding the level of cultural adjustment that individuals face on migrating to a new country. Not much attention has been given on studying repatriates. This phenomenological study deals with the experiences of 17 Indian repatriates, their emotional challenges and the various coping strategies that they had to employ in order to smoothen their repatriation process on returning to their home country. Six main themes were identified on applying thematic analysis to the individual semi-structured interviews: relief from hardships faced in the host country, stronger bond with the home country, feeling of being an alien in your home country, dynamic factors upon repatriation, emotive encounters and coming to terms with chaos associated with repatriation. Findings from the study, shows that the repatriates had faced many emotional challenges such as feeling of alienation, difficulty in adjusting to the old culture and getting a job, adjusting to the new work settings, grief on leaving the host country, idleness and laziness felt on repatriation, societal and familial pressure and financial struggles. Financial security, positive adjustment to the new work settings and the new income scale, lessons learned from the hostile experiences faced while abroad, pre-arrangements done in the home country before repatriating and reintegrating host culture into home culture served as an effective coping strategy, which eventually helped them in their successful repatriation over time.

**NurtureShock** - Po Bronson 2009-09-03

In a world of modern, involved, caring parents, why are so many kids aggressive and cruel? Where is intelligence hidden in the brain, and why does that matter? Why do cross-racial friendships decrease in schools that are more integrated? If 98% of kids think lying is morally wrong, then why do 98% of kids lie? What's the single most important thing that helps infants learn language? NurtureShock is a groundbreaking collaboration between award-winning science journalists Po Bronson and Ashley Merryman. They argue that when it comes to children, we've mistaken good intentions for good ideas. With impeccable storytelling

and razor-sharp analysis, they demonstrate that many of modern society's strategies for nurturing children are in fact backfiring--because key twists in the science have been overlooked. Nothing like a parenting manual, the authors' work is an insightful exploration of themes and issues that transcend children's (and adults') lives.

**Psychology of Terrorists** - Raymond H. Hamden 2018-11-20  
The *Psychology of Terrorists* examines the personality profile of the individual and categorizes the psychology of terrorists into four distinct profiles which are outlined and analyzed in detail. There are many books that cover social psychology and political violence and aggression, but few establish the mind-set of the terrorist as an individual. This includes taking into account personal experiences, and religious or political ideology for the purposes of understanding conceptual and tactical objectives and profiling terrorists to counter terrorist threats. Dr. Raymond Hamden presents a unique look at terrorists as individuals with personal motives as well as those of principle. The book presents an analysis of terrorists without prejudice or bias for any political, religious, nationality, creed, or race. Too many times the world see experts focus on issues that are based on their own predispositions or partialities. Although there is criticism on the reliability of profiling, this research demonstrates validity and reliability. It is vital to understand terrorist motivations and this can only be achieved by "knowing" the terrorists' psychological character, looking at the individual terrorist, taking into account particular experiences, psychological makeup, background, and fundamentalist ideology. *The Psychology of Terrorists: Profiling and CounterAction* will be a welcomed addition to psychologists, terrorism researchers, criminal profilers, investigators and intelligence professionals, counter- and anti-terrorism experts, as well as military, security, and law enforcement professionals tasked with protecting individuals from the various acts of terrorism, domestically and globally.
